

Service Manual

ORDER NO.
ARP3123

PLASMA DISPLAY

PDP-433CMX PDP-433MXE

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Type	Model		Power Requirement	Remarks
	PDP-433CMX	PDP-433MXE		
LUCBW	○	—	AC100 - 120V	
YVLDK	—	○	AC100 - 240V	

For details, refer to "Important symbols for good services".

SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or

(slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou de remplacement doivent avoir la même désignation.

(fusible de type lent) sur CCI indiquent que les pièces

SAFETY PRECAUTIONS

NOTICE :Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

1. When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
2. When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
4. Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
5. Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and service technician.
6. Perform the following precautions against unwanted radiation and rise in internal temperature.
 - Always return the internal wiring to the original styling.
 - Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.

7. Perform the following precautions for the PDP panel.

- When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
- Make sure that the panel vent does not break. (Check that the cover is attached.)
- Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.

8. Pay attention to the following.

- Be sure to wire the fan. If the fan does not work, the temperature will rise and cause the protection circuit to operate.
- When the front case is removed, infrared ray is radiated and may disturb reception of the remote control unit.
- Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

Leakage Current Cold Check

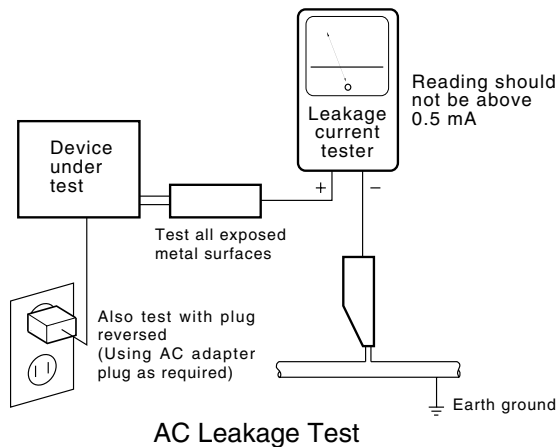

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of $0.3M\Omega$ and a maximum resistor reading of $5M\Omega$. Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚡ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

■ CHARGED SECTION AND HIGH VOLTAGE GENERATING POINT

■ Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

1. AC Power Cord
2. AC Inlet with Filter
3. Power Switch (S1)
4. Fuse (In the SW POWER SUPPLY Module)
5. STB Transformer and Converter Transformer
(In the SW POWER SUPPLY Module)
6. Other primary side of the SW POWER SUPPLY Module

■ High Voltage Generating Point

The places where voltage is 100V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

1. SW POWER SUPPLY Module (215V)
2. X DRIVE Assy (-280V to 215V)
3. Y DRIVE Assy (345V)
4. SCAN (A) Assy (345V)
5. SCAN (B) Assy (345V)
6. X CONNECTOR (A) Assy (-280V to 215V)
7. X CONNECTOR (B) Assy (-280V to 215V)

Fig.1 Charged Section and High Voltage Generating Point (Rear View)

[Important symbols for good services]

In this manual, the symbols shown-below indicate that adjustments, settings or cleaning should be made securely. When you find the procedures bearing any of the symbols, be sure to fulfill them:

1. Product safety

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

■ PLASMA DIAPLAY (PDP-433CMX and PDP-433MXE)

General

Light emission panel 43 inch plasma display panel
 Number of pixels 1024 x 768
 Power supply AC 100 - 120 V, 50/60 Hz (PDP-433CMX)
 Power supply AC 100 - 240 V, 50/60 Hz (PDP-433MXE)
 Rated current 2.98 A - 2.48 A (PDP-433CMX)
 Rated current 2.98 A - 1.24 A (PDP-433MXE)
 Standby power consumption 0.9 W (PDP-433CMX)
 Standby power consumption 1 W (PDP-433MXE)
 External dimensions 1070 (W) x 630 (H) x 98 (D) mm
 42-1/8 (W) x 24-13/16 (H) x 3-7/8 (D) in.
 (including display stand)
 1070 (W) x 653 (H) x 300 (D) mm
 42-1/8 (W) x 25-23/32 (H) x 11-13/16 (D) in.
 Weight 31.5 kg (69 lbs. 7 oz)
 (including display stand) 32.1 kg (70 lbs. 12 oz)

Input/output

Video

INPUT 1

- Input** Mini D-sub 15 pin (socket connector)
 RGB signal (G ON SYNC compatible)
 RGB ... 0.7 Vp-p/75 Ω /no sync.
 HD/CS, VD ... TTL level
 /positive and negative polarity
 /2.2 k Ω
 G ON SYNC
 ... 1 Vp-p/75 Ω /negative sync.
 *Compatible with Microsoft's Plug & Play
 (VESA DDC1/2B)

- Output** Mini D-sub 15 pin (socket connector)
 75 Ω /with buffer

INPUT 2

- Input** BNC jack (x5)
 RGB signal (G ON SYNC compatible)
 RGB ... 0.7 Vp-p/75 Ω /no sync.
 HD/CS, VD ... TTL level
 /positive and negative polarity/
 75 Ω or 2.2 k Ω
 (impedance switch)
 G ON SYNC ...
 1 Vp-p/75 Ω /negative sync.

Audio

- Input** AUDIO INPUT (for INPUT 1/2)
 Stereo mini jack
 L/R ... 500mVrms/more than 10 k Ω
- Output** AUDIO OUTPUT
 Stereo mini jack
 L/R ... 500mVrms (max)/less than 5 k Ω
- SPEAKER
 L/R ... 8 - 16 Ω /2W +2W (at 8 Ω)

Control

- RS-232C ... D-sub 9 pin (pin connector)
 COMBINATION IN/OUT
 ... Mini DIN 6 pin (x2)
 CONTROL IN/OUT ... monaural mini jack (x2)

Accessories

- Power cord 1 (PDP-433CMX Only)
 Remote control unit 1
 Remote control unit holder 1
 AA (R6) batteries 2
 Cleaning cloth 1
 Speed clamps 2
 Bead bands 2
 Warranty 1 (PDP-433CMX Only)

 Display stands 2
 Washers 2
 Hex hole bolts (M8X40) 2
 Ferrite core 1 (PDP-433MXE Only)
 Cable tie 1 (PDP-433MXE Only)
 • Due to improvements, specifications and design are subject to
 change without notice.

● Accessories

• Display Stand (x2) (AMR3264)

2. EXPLODED VIEWS AND PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screws adjacent to ∇ mark on the product are used for disassembly.
- For the applying amount of lubricants or glue, follow the instructions in this manual.
(In the case of no amount instructions, apply as you think it appropriate.)

■ Caution in Replacement of Chassis Block

Please order the PDP Service Assy 433 (AWU1043) when replacing the Chassis block.
PDP Service Assy 433 is all common use parts of for business, public use and module.
Supply it by the state that installed Circuit Board Spacer (AEC1872) and Wire Saddle (AEC1904) as follows.
Therefore need to remove it in accordance with model.

Confirm character carved a seal near the parts, and remove it.

P : Public exclusive use

W : Module exclusive use

PW : Common use of public use and module

* In case of this unit, the parts that "W" is marked removes.

V: 5V/div. H: 2msec/div.

5. PCB PARTS LIST

NOTES : ● Parts marked by “NSP” are generally unavailable because they are not in our Master Spare Parts List.

● The Δ mark found on some component parts indicates the importance of the safety factor of the part.

Therefore, when replacing, be sure to use parts of identical designation.

● When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by

$J = 5\%$, and $K = 10\%$).

$560\ \Omega \rightarrow 56 \times 10^1 \rightarrow 561$ RD1/4PU $\begin{bmatrix} 5 & 6 & 1 \end{bmatrix} J$

$47k\ \Omega \rightarrow 47 \times 10^3 \rightarrow 473$ RD1/4PU $\begin{bmatrix} 4 & 7 & 3 \end{bmatrix} J$

$0.5\ \Omega \rightarrow R50$ RN2H $\begin{bmatrix} R & 5 & 0 \end{bmatrix} K$

$1\ \Omega \rightarrow 1R0$ RS1P $\begin{bmatrix} 1 & R & 0 \end{bmatrix} K$

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

$5.62k\ \Omega \rightarrow 562 \times 10^1 \rightarrow 5621$ RN1/4PC $\begin{bmatrix} 5 & 6 & 2 & 1 \end{bmatrix} F$

6. ADJUSTMENT

6.1 SERVICE FACTORY MODE

Perform the operations of Service Factory mode using the Remote Control Unit provided with the Plasma Display (AXD1459).

6.1.1 State Transition Diagram

• AXD1459
(PDP-503CMX / PDP-433CMX)

• AXD1432
(PDP-501HD)

• AXD1673
(PDP-502HD)

■ Caution of Operation of the Remote Control Unit

- In the service factory mode, use the key which does not exist in a remote control unit (AXD1459) attached to this product as the direct selection key of item when selects each item. These keys can use with the attached remote control units (AXD1432 and AXD1673) in the PDP-501HD and PDP-502HD.
- When operate the service factory mode with the attached remote control unit in this product, selection is possible with the following key cyclically.
 - Large item selection: MUTE key
 - Selection except large item: UP (▲), DOWN (▼) keys

■ Operation When Entered the Service Factory Mode

① Setting value of menu mode

- Reset "PICTURE" item (center value).
 - Notes : Adjustment value of "PICTURE" to reset is limited to the following face.
 - At VIDEO: Current signal mode of the selected input function
 - At PC: Correspond to the history of the signal mode input into past, "Table A to H".
- Reset all "SCREEN" items (center value).
 - Note: Adjustment value of "SCREEN" to reset is limited to the current signal mode of the selected input function.
 - Supplement: If execute FINAL SET UP or PICTURE DEFAULT, minimize the adjustment value of menu mode here so that it becomes the center value.
- "SET UP" and "OPTION" of menu mode are maintained except items as follows.
 - COLOR TEMP: It becomes "MIDDLE" setting
 - AUTO POWER OFF/POWER MANAGEMENT: Setting is maintained, but do not work

② Adjustment value of the integrator mode

- Adjustment values of "PICTURE" and "WHITE BAL" select the adjustment values which are applicable to the current input function signal mode.
 - Notes : Adjustment value of "PICTURE" and "WHITE BAL" to reset is limited to the following face.
 - At VIDEO: Current signal mode of the selected input function
 - At PC: Correspond to the history of the signal mode input into past, "Table A to H".
- SCREEN setting value is maintained.
- "SET UP" and "OPTION" of integrator menu are maintained except items as follows.
 - SIDE MASK LEVEL: Adjustment value is reset, and it becomes default value.
 - FULL MASK which was set with the integrator mode: Release
 - OFF TIMER: Release
- COLOR MODE (integrator menu) setting maintains setting in the integrator menu.

③ Others

- When input signal mode changed, change setting, and display default screen (INFORMATION-VERSION) of the service factory mode. Maintain the service factory mode.
 - Note: At a point in time when the input signal mode changed, perform an operation of ① and ②.
- Switch it in selected FUNCTION when switched FUNCTION. Then display default screen (INFORMATION-VERSION) of the service factory mode, and maintain the service factory mode.
 - Note: At the point that switched FUNCTION, perform an operation of ① and ②.
- Perform COLOR DETECT setting with "COLOR SYSTEM" of set menu mode.
- Only address 0100-01FF of module microcomputer / EEPROM copy/updates the data to the module microcomputer area of main microcomputer EEPROM.
- Various protection feature of the panel (Still picture detection, Block brightness detection and SCAN IC protection feature) turns OFF.
 - Notes: When each protection feature turns OFF once and released the factory mode, maintain it. Protection feature turns ON by turning ON from POWER OFF. Therefore turn ON from POWER OFF by all means in order to operate protection feature when released the factory mode.
- In the no input, apply playback and non-correspondence PC signal input, accepts only the setting item that does not depend on a signal mode. (But refer to the item "MASK1 and MASK2" about MASK setting.)
 - An item depending on the signal mode turns the display color to gray and it cannot change the setting.

6.1.2 Adjustment Items Table of Service Factory

SLOT

	Name	OSD Display Name	RS-232C Command	Service Factory Operation	Adjustment Range (OFFSET Reference Value)

	R LOW	R. LOW		VOP-CM2-8	0 to 255 [128]
	G LOW	G. LOW		VOP-CM2-9	0 to 255 [128]
	B LOW	B. LOW		VOP-CM2-10	0 to 255 [128]

■ Calculation of Adjustment Value in the Service Factory Mode

- As for the adjustment value in the service factory mode, it becomes an actual adjustment value that subtracted OFFSET reference value (value in [] of the above table) from the value that added a REFERENCE adjustment value and an OFFSET adjustment value.

Notes: It becomes the adjustment value the value that adjusted it with REFERENCE because there is not an OFFSET adjustment value as for R SIDE MASK LEV, G SIDE MASK LEV and B SIDE MASK LEV of item SIDE MASK LEVEL and X-SUS-B, X-SUS-G, Y-SUS-B, Y-SUS-G, V-SUS and V-OFFSET of item DIGITAL.

- As for COLOR MODE2 and COLOR TEMP, it becomes OFFSET value of each the value that subtracted OFFSET reference value (a value in [] of the above table) from a adjustment value of selected mode. It becomes a adjustment value of the last RGB 2 device (IC30 and IC102) the value that added this OFFSET value to each adjustment item of RGB 2.

■ Actual Calculation Example

- Each adjustment value of SLOT/ RGB 1/RGB2/DIGITAL
(REFERENCE value)

+

{ (OFFSET value) – [OFFSET reference value] } ... Calculation of a value to add as OFFSET

- COLOR MODE2 OFFSET value

{ (COLOR MODE2 adjustment value) - [OFFSET reference value] } ... Calculation of a value to add as OFFSET for COLOR MODE2

Note: Add it only in COLOR MODE2 selection.

- COLOR TEMP OFFSET value

{ (COLOR TEMP adjustment value) - [OFFSET reference value] } ... Calculation of a value to add as OFFSET for COLOR TEMP

Note: Add it only in COLOR TEMP 1,2,4 and 5 selection.

Perform the addition in the normal operation, menu mode and COLOR TEMP adjustment mode of the service factory mode (in item VIDEO OPTION), and add OFFSET value of selected setting.

COLOR TEMP OFFSET does not add it in order to work by COLOR TEMP 3 setting in the integrator mode and in the service factory mode except COLOR TEMP adjustment mode.

6.1.3 Display Description of Service Factory Menu

1. In Adjustment Item

	1	5	10	15	20	25	30	32		
1	OFS-SLOT			#1-S1-IN4-04-2*NT						
5										
10										
15	Y-DELAY			:***(***)						
16										

Display color : White

Halftone : Blue (second row/15th row
for each 1 to 32 columns)

When there is not item which is applicable to the input signal mode, display the adjustment value with "———" (———)", and perform the item indication color to gray.

- Second row / 2th to 12th columns : Display the upper layer of selection item • • • At the Service factory mode
- Second row / 2th to 3th columns : Display the ID No. • • • At the RS-232C factory mode
- Second row / 5th to 12th columns : Display the upper layer of selection item • • • At the RS-232C factory mode
- Second row / 15th to 16th columns : Current color mode setting
- Second row / 18th to 19th columns : Current slot type

Slot Type or Model Type	At PDA-5002 is mounted with	PDP-503PRO and PRO-1000HD	Outside Product Slot	No SLOT
Display	S1	US	T1 to T8	NO

- Second row / 21th to 23th columns : Current function
 - Second row / 25th to 28th columns : Current signal mode
 - Second row / 28th columns : Current Screen size (Refer to the "classification of input signal" with regard to each numeric value.)
- Current signal mode displays the signal mode of any of mode 03, mode 31, mode E1, mode 61 or mode 71.

Setting	Signal Mode Display
VIDEO	03
VGA	31
WVGA	E1
XGA	61
WXGA	71

Current signal mode displays the signal mode of any of mode 12 or mode 13.

HDTV Mode Setting (Integrator Menu)	Signal Mode Display
1080i	12
1035i	13

Display in the no signal and non-correspondence signal

Signal Mode Display	Signal Definition
FB	OUT OF RANGE (The signal that the measurement is impossible with the main microcomputer)
FC	OUT OF RANGE (In the video card when video signal does not input)
FD	OUT OF RANGE (In the non-correspondence signal at DVI input)
FE	OUT OF RANGE (When the measurement is possible with the main microcomputer, and non-correspondence signal that is not applicable to FC and FD)
FF	No signal

- Second row / 29th column : Current input form

Input Form	Component	Video-RGB	Composite	Y/C
Display	#	@	*	/

Non-display excepting above form (blank).

- Second row / 30th to 31th columns : Current color system

Color System	NTSC	PAL	SECAM	4.43NTSC	PAL-M	PAL-N	BLACK/WHITE
Display	NT	PL	SC	4N	PM	PN	BW

Non-display it (blank) when a case except COLOR SYSTEM mentioned above and COLOR SYSTEM setting is fixed.

- 15th row / 2th to 20th columns : Current item selection

- 15th row / 22th to 31th columns :

RANGE CHECK selection : Current selecting value

1. At REFERENCE selection : Adjustment value
2. At OFFSET selection : OFFSET value (adjustment value) * Adjustment value is REFERENCE value + OFFSET value.
3. At VIDEO OPTION selection : No display
- At INITIALIZE selection : The setting that is selected. (There is no display in the item which there is the lower layer.)

2. INFORMATION

•Operating specification

- Start from SIDE MASK LEVEL (Key 1) when shifted to this setting screen.
However, the movement original item to be selected when shifted from the lower layer.
- When each key was pressed, follow the required operation.
- When entered the service factory mode, COLOR MODE works by integrator setting.
However in the COLOR MODE2 adjustment, Work with COLOR MODE2 without relation in COLOR MODE setting of the integrator menu.
- COLOR TEMP Setting in the COLOR TEMP Adjustment
When entered the service factory mode without a relation in user setting, COLOR TEMP becomes "MIDDLE".
In the COLOR TEMP adjustment, switch the operation to setting of selected COLOR TEMP.

<<>> : YES/NO selection
 SET : Store the SET DATA at YES selection
 and shift to INIT screen.
 Hold the NOW DATA at NO selection
 and shift to INIT screen.

- FINAL SET UP: Setting to the factory shipping state.
(Refer to the Final Setup Details.)
- VIDEO STANDARD: Set the peak occurrences of STANDARD (USER MENU / POWER CONTROL) in the video system signal.
(Set the following table 1.) Note: Please do not perform the change of setting in the service.
- PC STANDARD: Set the peak occurrences of STANDARD (USER MENU / POWER CONTROL) in the PC system signal.
(Set the following table 2.) Note: Please do not perform the change of setting in the service.
- VIDEO MODE1: Set the peak occurrences of MODE1 (USER MENU / POWER CONTROL) in the video system signal.
(Set the following table 3.) Note: Please do not perform the change of setting in the service.
- PC MODE1: Set the peak occurrences of MODE1 (USER MENU / POWER CONTROL) in the PC system signal.
(Set the following table 4.) Note: Please do not perform the change of setting in the service.

		Current Input Signal	
		VIDEO	PC
POWER CONTROL setting	STANDARD mode	Table1	Table2
	MODE1	Table3	Table4
	MODE2	PL6 (fixed)	

- EEP DATA READ: Display the each address data of EEPROM.

15							
16							

<<>> : Select the address (four places) place.
 ▲▼ : Select numeric value.
 SET : Shift to upper layer.
 Update display data (hex) every address modification.

 Display color : White (Selected address is yellow)
 Half tone : Blue (second row / 15th row for
 each 1 to 32th columns)

- MASK1: Select the full mask.
Note: Mask 1/2 are commonness and perform one item last memory.
- MASK2: Select the mask pattern.
Note: Mask 1/2 are commonness and perform one item last memory.

Caution: (item 14, 15 commonness)

- When key operation is done and performs OSD display, turns OFF FULL MASK for two seconds and display OSD. (common to in all modes)
- In FULL MASK selection (in MASK selection menu), Select the mask and turn off OSD two seconds later of no operation, and MASK screen displays.
- Perform MASK determination (press "SET"), and FULL MASK screen display starts.
- Release of the mask is possible only with "M00" with the RS-232C factory adjustment mode or "MASK OFF" of the service factory menu.
(Release is impossible with "FULL MASK OFF" of the integrator menu and "FMN" of the RS-232C command.)

16. MEMO: Display and edit the memo data.

1	1	5	10	15	20	25	30	32
1	I	N	I	T

10								
15								
16								

<MEMO/SELECT>

- Select MEMO to edit with ▲▼ keys.
- Shift to the <MEMO/EDIT> screen with the SET key.
- When selects BACK and presses the SET key, shift to the upper layer.

1	1	5	10	15	20	25	30	32
1								
5								
10								
15								
16								

<MEMO/EDIT>

- Editing technique refers to the step of INPUT label of the user menu.
- Default is "- - - - -" display.
- When "RESET" was pressed, display returns to the default display setting.

17. SERVICE PARTS : Rewrite a PD number of the module microcomputer to the parts recognition number for service.

Refer to "7.1.3 AUTOMATIC BACKUP OF DIGITAL VIDEO ASSY DATA".

For service recognition number: Modify the first column of the PD number to F

Caution: Only the EEPROM for the module microcomputer to modify the service recognition number.

A service identification number of module microcomputer data area in EEPROM for main microcomputer does not rewrite it.

Examples: F691 (an original PD number is 5691).

18. PICTURE DEFAULT

- The data which adjusted in the service factory mode reflect as default value of PICTURE, WHITE BAL and SIDE MASK LEVEL of the integrator menu.
- The value that adjusted in the service factory mode is not reflected to all video output data except the service factory mode so long as does not execute "PICTURE DEFAULT" or "FINAL SETUP".
- Execute "PICTURE DEFAULT" after the adjustment for the value that adjusted in the service factory mode is reflected to video output data.

Note: When executed "PICTURE DEFAULT"

- ① All the PICTURE items of the user menu are reset.
- ② PICTURE, WHT BAL and SIDE MASK LEVEL of the integrator menu become default value all in base with the current factory adjustment value.

●Operating specification

- Start from MASK OFF (Key1) when shifted to this setting screen. However, set MASK position is a default when sets an either mask already.
- When entered this mode by the state that either MASK set of MASK2, setting of MASK2 is off, and MASK1 starts from MASK OFF (Key1).
- MASK67-MASK74 are not assigned to the direct key, it is selectable only with up and down ("▲", "▼")keys.
- When a key was pressed, follow the required operation after performed the last memory of the current adjustment value.

Caution: In the MASK display, do not display the OSD.

When other operations were selected, perform OSD display after MASK OFF for two seconds.
 Then return to selected FULL MASK display.

6.2 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

■ RGB Assy

● When repaired

1. Adjustment is impossible when replaced the Matrix IC or AD/PLL/AMP IC.
2. Adjustment is unnecessary in case of others.

● When replaced

Color balance adjustment

■ SW POWER SUPPLY Module

● When replaced

No adjustment required.

■ DIGITAL VIDEO Assy

● When repaired

No adjustment required.

● When replaced

1. Adjustment is unnecessary when replaced only the DIGITAL VIDEO Assy.
2. When replaced it with RGB Assy simultaneously, remove IC1204 (24LC04(1) SN-TBB) from the former PC Board to replace, and install it to the new PC Board.
3. When use new Assy which replaces it and recovered as service parts once again, replace IC1204 with new IC.

■ Y DRIVE Assy

● When repaired

1. VOFS/VH/IC5V voltage adjustment
2. Timing adjustment of pulse module

● When replaced

1. Panel white balance adjustment

■ X DRIVE Assy

● When repaired

1. VRN voltage adjustment
2. Timing adjustment of pulse module

● When replaced

1. Panel white balance adjustment

■ Video Card (PDA-5002)

For Adjustment, Refer to the service manual ARP3093 for PDA-5002

● When repaired

1. Y LEVEL adjustment
2. Color difference and TINT adjustment

● When replaced

No adjustment required.

Fig. 1 PC Board Location (rear side view)

6.3 ADJUSTMENT

6.3.1 Main Unit Adjustment

■ VOFS/VH/IC5V Voltage Adjustment

Input Signal	Adjusting Point	Adjusting Method																																																																																																																																				
White 100%	VR2701 (VOFS) (Y DRIVE Assy)	<p>VOFS (Offset voltage) adjustment</p> <p>Method 1</p> <p>1. Write down a adjustment value of V-OFFSET of REF-DIG mode in the factory mode.</p> <p>2. Set this adjustment value to center (128).</p> <p>3. Adjust VR2701 so that the voltage between K2701 (VOFS) and K2703 (SUS GND) becomes 45V.</p> <p>4. Return it to the value that wrote down a adjustment value of V-OFFSET in step 1.</p> <p>Method 2</p> <p>1. Read the adjustment value of V-OFFSET of REF-DIG mode in the factory mode.</p> <p>2. Adjust VR2701 so that the voltage between K2710 (VOFS) and K2703 (SUS GND) becomes following voltage $\pm 0.5V$.</p> <table><thead><tr><th>Input Command</th><th>DAC Output</th><th>Setting Voltage</th><th>Input Command</th><th>DAC Output</th><th>Setting Voltage</th></tr></thead><tbody><tr><td>VOF000</td><td>0.4</td><td>25</td><td>VOF134</td><td>2.599212598</td><td>45.94488</td></tr><tr><td>VOF006</td><td>0.4984375</td><td>25.9375</td><td>VOF141</td><td>2.71496063</td><td>47.04724</td></tr><tr><td>VOF013</td><td>0.61328125</td><td>27.03125</td><td>VOF147</td><td>2.814173228</td><td>47.99213</td></tr><tr><td>VOF019</td><td>0.71171875</td><td>27.96875</td><td>VOF153</td><td>2.913385827</td><td>48.93701</td></tr><tr><td>VOF026</td><td>0.8265625</td><td>29.0625</td><td>VOF160</td><td>3.029133858</td><td>50.03937</td></tr><tr><td>VOF032</td><td>0.925</td><td>30</td><td>VOF166</td><td>3.128346457</td><td>50.98425</td></tr><tr><td>VOF038</td><td>1.0234375</td><td>30.9375</td><td>VOF172</td><td>3.227559055</td><td>51.92913</td></tr><tr><td>VOF045</td><td>1.13828125</td><td>32.03125</td><td>VOF179</td><td>3.343307087</td><td>53.0315</td></tr><tr><td>VOF051</td><td>1.23671875</td><td>32.96875</td><td>VOF185</td><td>3.442519685</td><td>53.97638</td></tr><tr><td>VOF058</td><td>1.3515625</td><td>34.0625</td><td>VOF191</td><td>3.541732283</td><td>54.92126</td></tr><tr><td>VOF064</td><td>1.45</td><td>35</td><td>VOF198</td><td>3.657480315</td><td>56.02362</td></tr><tr><td>VOF070</td><td>1.5484375</td><td>35.9375</td><td>VOF204</td><td>3.756692913</td><td>56.9685</td></tr><tr><td>VOF077</td><td>1.66328125</td><td>37.03125</td><td>VOF211</td><td>3.872440945</td><td>58.07087</td></tr><tr><td>VOF083</td><td>1.76171875</td><td>37.96875</td><td>VOF217</td><td>3.971653543</td><td>59.01575</td></tr><tr><td>VOF090</td><td>1.8765625</td><td>39.0625</td><td>VOF223</td><td>4.070866142</td><td>59.96063</td></tr><tr><td>VOF096</td><td>1.975</td><td>40</td><td>VOF230</td><td>4.186614173</td><td>61.06299</td></tr><tr><td>VOF102</td><td>2.0734375</td><td>40.9375</td><td>VOF236</td><td>4.285826772</td><td>62.00787</td></tr><tr><td>VOF109</td><td>2.18828125</td><td>42.03125</td><td>VOF242</td><td>4.38503937</td><td>62.95276</td></tr><tr><td>VOF115</td><td>2.28671875</td><td>42.96875</td><td>VOF249</td><td>4.500787402</td><td>64.05512</td></tr><tr><td>VOF122</td><td>2.4015625</td><td>44.0625</td><td>VOF255</td><td>4.6</td><td>65</td></tr><tr><td>VOF128</td><td>2.5</td><td>45</td><td></td><td></td><td></td></tr></tbody></table> <p>The symptom is case of mis-adjustment</p> <p>If the VOFS Voltage adjustment is not performed properly, dots like blinking luminance points appear. ■ Timing Adjustment of X and Y DRIVE Assys Control Signal

● Purpose

- Pulse module loads in DRIVE Assy as one of heat measures of DRIVE Assy. Adjust the drive timing of the pulse module driving parallel with VR.
- Pulse module has each peculiar delay time. Readjustment is necessary when replaced the pulse module in the X and Y DRIVE Assys.

● Adjustment Method

CR delay circuit is each inserted on signal path of four control signals (SUS-U, SUS-B, SUS-D, SUS-G) driving the pulse module.

Quantity of delay can adjust pulse module of one side with VR.

Adjust VR while measuring a waveform of the pulse module, and match a timing.

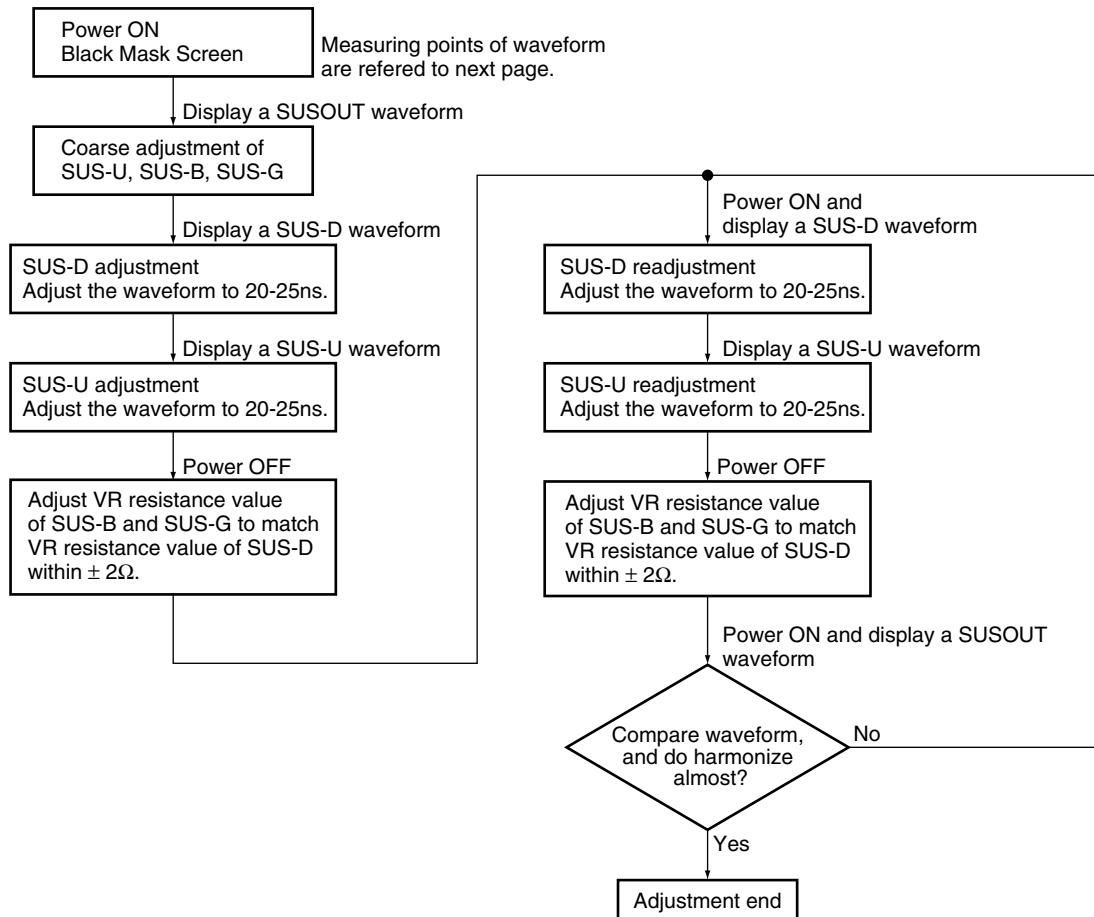

Adjustment VR

	X DRIVE	Y DRIVE
SUS-U	VR3203	VR2204
SUS-D	VR3202	VR2203
SUS-B	VR3201	VR2202
SUS-G	VR3200	VR2201

Test pin for adjustment and measurement

Pulse Module	X DRIVE		Y DRIVE	
	Upper	Lower	Upper	Lower
SUSOUT	K3105	K3106	K2212	K2203
SUS-U	K3200	K3204	K2220	K2224
SUS-D	K3108	K3205	K2207	K2225

● Adjustment Procedure

As for this adjustment, adjustment with set state is difficult.
Therefore replace it every Assy when replacing the pulse module.

Measuring Waveform of Pulse Module Timing Adjustment

Timing adjustment of the pulse module control signal adjusts with the sustain pulse of eighth pulse (X DRIVE) and the ninth pulse (Y DRIVE) from the back of 6SF.

Measuring point of waveform

Y DRIVE SUSOUT waveform

X DRIVE SUSOUT waveform

- Perform adjustment of waveform with a black mask screen.
- It is easy to adjust when turned field AB offset to OFF (RS-232C command: OCN) in adjustment.

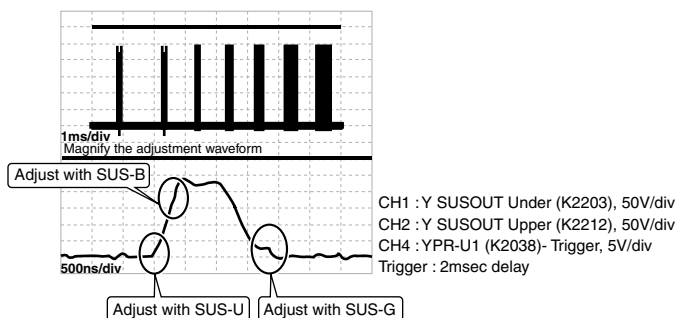

Note:

- Sampling rate of oscilloscope sets it more than 500MS/s in order to perform ns order adjustment.
- Collecting calibration of probe before adjustment by all means.
- Connect GND of probe measuring waveform to SUSGND terminal by all means.
- Precise waveform is not displayed, and an adjustment gap may occur that does not collect GND properly.

When took waveform be each drive Assy unit, measure it at the fourth sustain pulse from the back except for a large width sustain pulse. Therefore, when measured both waveform of the X and Y drives together, it becomes the sustain pulse of 8 and 9 pulses from the back.

Waveform coarse adjustment

Measure the SUSOUT waveform

When there is a gap with waveform of CH1 / CH2 of the part which enclosed in the following circle, adjust required VR to overlap the waveform.

● SUS-D Adjustment (Y DRIVE)

Magnification

Magnification

CH1 : Y SUS-D Under (K2225), 50V/div
CH2 : Y SUS-D Upper (K2207), 50V/div
CH4 : YPR-U1 (K2038)- Trigger, 5V/div
Trigger : 2msec delay

● SUS-U Adjustment (Y DRIVE)

Magnification

Magnification

CH1 : Y SUS-U Under (K2224), 50V/div
CH2 : Y SUS-U Upper (K2220), 50V/div
CH4 : YPR-U1 (K2038)- Trigger, 5V/div
Trigger : 2msec delay

Caution:
Not absolutely mistaking upper
and lower of waveform.

● Waveform Confirmation in Adjustment completion

Measure the SUSOUT waveform

CH1 : Y SUSOUT Under (K2203), 50V/div
CH2 : Y SUSOUT Upper (K2212), 50V/div
CH4 : YPR-U1 (K2038)- Trigger, 5V/div
Trigger : 2msec delay

Confirm it to waveform of CH1 / CH2 of the part which enclosed in the following circle whether there is not a large gap.
(A gap of the quantity that shifts 20nS and adjusted remains.)

When adjust in the power supply ON state, change so that the quantity of gap that adjusted by temperature-rise of the pulse module becomes small.
Therefore, perform high power OFF (RS-232C command: DRF) except measurement time of waveform when adjusts, and adjustment error by temperature-rise does not occur.

■ SUS-B Ground Timing Adjustment

It is necessary to readjust this adjustment when replaced the X or Y DRIVE Assy and the pulse module.

● Measurement point and method

Measurement point

X DRIVE Assy :

SUSOUT A : K3105 , GND : K3201

Y DRIVE Assy :

SUSOUT B : K32212 GND : K2219

Measurement screen : PC 60Hz at all black screen

RS-232C command

PC60Hz : F61, Black mask : M61

The measurement is easy to perform when turns field AB alternation to OFF. (RS-232C command: OCN)

Measurement procedure

Measure a sustain pulse of the fourth pulse (X DRIVE) and the fifth pulse (Y DRIVE) from the back of the 5th FS.

1. Check the ground voltage.
2. Shift a ground timing to the front till the ground voltage is below 180V enough.
3. Delays a ground timing by one clock, and set a ground timing to the best voltage that does not exceed 180V.

Adjustment parameter

X DRIVE: XSUSB (RS-232C command : XSB)

Y DRIVE: YSUSB (RS-232C command : YSB)

Note:

- Connect GND of probe measuring waveform to SUSGND terminal by all means.
- Precise waveform is not displayed, and an adjustment gap may occur that does not collect GND properly.

● Waveform in the measurement

Measure a waveform of this section and adjust.

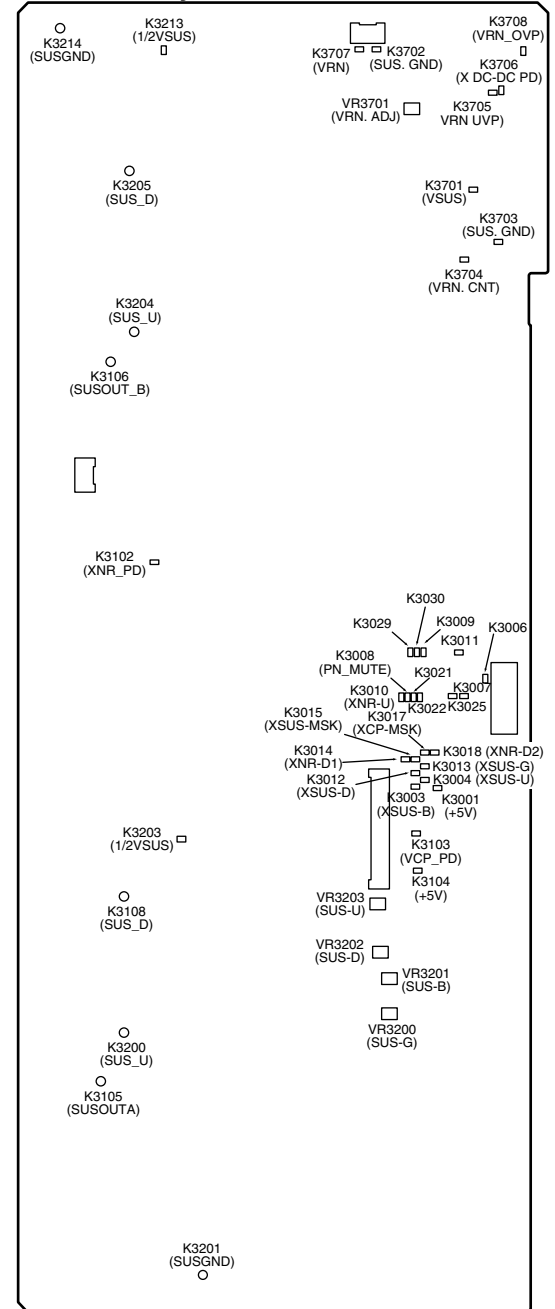

Magnify the fourth pulse sustain pulse (XSUSOUT waveform) from the back of the above waveform.

Y DRIVE Assy

X DRIVE Assy

	RSL	R SIDE MASK LEVEL	R SIDE MASK LEVEL adjustment	O	O	—	O	O
	RHA	AD R HIGH	AD R HIGH adjustment	O	—	—	O	O
S	RLA	AD R LOW	AD R LOW adjustment	O	—	—	O	O
	SV1	SUB VOLUME INPUT1	Adjust the sub-volume of INPUT1	O	O	—	O	O
	SV2	SUB VOLUME INPUT2	Adjust the sub-volume of INPUT2	O	O	—	O	O
	SV3	SUB VOLUME INPUT3	Adjust the sub-volume of INPUT3	O	O	—	O	O
	SV4	SUB VOLUME INPUT4	Adjust the sub-volume of INPUT4	O	O	—	O	O
	SV5	SUB VOLUME INPUT5	Adjust the sub-volume of INPUT5	O	O	—	O	O
	SHP	H.SHARP	H.SHARP/H.ENHANCE adjustment	O	O	—	O	O
T	SHV	V.SHARP	V.SHARP/V.ENHANCE adjustment	O	O	—	O	O
	TNT	TINT	TINT adjustment	O	O	—	O	O
	UP0	UP10	Turn the adjustment value to 10 UP	O	O	O	—	—
	UPn	UPn	Turn the adjustment value to n UP (n = 1, 2, • • • 8, 9)	O	O	O	—	—
U	UPF	UP FULL	Turn the adjustment value to maximum	O	O	O	—	—
	VOF	VOFFSET ADJUST	Vofs adjustment	O	—	—	O	O
	VOL	VOLUME	Audio volume adjustment	O	O	O	O	O
	VSU	VSUS ADJUST	Vsus adjustment	O	—	—	O	O
	VPS	VERTICAL POSITION	Adjust the vertical position	O	O	—	O	O
V	VSI	VERTICAL SIZE	Adjust the vertical size	O	O	—	O	O
	XSB	XSUS B	X-SUS-B pulse adjustment	O	—	—	O	O
	XSG	XSUS G	X-SUS-G pulse adjustment	O	—	—	O	O
Y	YSB	YSUS B	Y-SUS-B pulse adjustment	O	—	—	O	O
	YSG	YSUS G	Y-SUS-G pulse adjustment	O	—	—	O	O
	YDL	Y-DELAY	Y-DELAY adjustment	O	—	—	O	O
	YOL	Y-OUT LEVEL	Y-OUT LEVEL adjustment	O	—	—	O	O

6.4.2 RS-232C COMMAND (for setting)

	Command	Name	Function	RS-232C Factory	RS-232C Integrator	Normal Validity	Direct Validity	UP/DOWN Validity
A	AJN	ADJUST NO	Complete the RS-232C integrator mode	—	O	—	—	—
	AJY	ADJUST YES	Start the RS-232C integrator mode	—	—	O	—	—
	AMN	AUDIO MUTE NO	Turn the audio mute to OFF	O	O	O	—	—
	AMY	AUDIO MUTE YES	Turn the audio mute to ON	O	O	O	—	—
	AB0	ABL MODE0	Set the ABL setting to MODE0 (REFERENCE)	O	—	—	—	—
	AB1	ABL MODE1	Set the ABL setting to MODE1 (PC)	O	—	—	—	—
	AB2	ABL MODE2	Set the ABL setting to MODE2 (VIDEO60Hz)	O	—	—	—	—
B	AB3	ABL MODE3	Set the ABL setting to MODE3 (VIDEO50Hz)	O	—	—	—	—
	BBY	VIDEO RGB YES	Set the signal format to VIDEO RGB	O	O	—	—	—
	BR1	BAUD RATE1	Set the RS-232C baud rate to 1200BPS	O	O	—	—	—
	BR2	BAUD RATE2	Set the RS-232C baud rate to 2400BPS	O	O	—	—	—
	BR3	BAUD RATE3	Set the RS-232C baud rate to 4800BPS	O	O	—	—	—
	BR4	BAUD RATE4	Set the RS-232C baud rate to 9600BPS	O	O	—	—	—
	BR5	BAUD RATE5	Set the RS-232C baud rate to 19200BPS	O	O	—	—	—
C	BR6	BAUD RATE6	Set the RS-232C baud rate to 38400BPS	O	O	—	—	—
	CM1	COLOR MODE 1	Set to COLOR MODE 1	O	O	O	—	—
	CM2	COLOR MODE 2	Set to COLOR MODE 2	O	O	O	—	—
	CP1	VIDEO COMPONENT1 YES	Set the signal format to VIDEO COMPONENT1	O	O	—	—	—
	CP2	VIDEO COMPONENT2 YES	Set the signal format to VIDEO COMPONENT2	O	O	—	—	—
	CDE	COLOR DETECT EURO	Set the color detect to EURO	O	O	—	—	—
	CDM	COLOR DETECT ALL	Set the color detect to ALL	O	O	—	—	—
	CDA	COLOR DETECT SA	Set the color detect to SA	O	O	—	—	—
	CT1	COLOR TEMP.1	Set the color temperature to -3000K equivalency	O	O	—	—	—
	CT2	COLOR TEMP.2	Set the color temperature to -2000K equivalency	O	O	—	—	—
	CT3	COLOR TEMP.3	Set the color temperature to \pm 0K equivalency	O	O	—	—	—
	CT4	COLOR TEMP.4	Set the color temperature to +1000K equivalency	O	O	—	—	—
	CT5	COLOR TEMP.5	Set the color temperature to +2000K equivalency	O	O	—	—	—
	CL1	CLAMP MODE1	Set the clamp position to AUTO	O	O	—	—	—
D	CL2	CLAMP MODE2	Set the clamp position to fix	O	O	—	—	—
	DIN	OSD DISPLAY NO	Prohibit OSD display	O	O	O	—	—
	DIY	OSD DISPLAY YES	Permit OSD display	O	O	O	—	—
	DOF	DISPLAY OFF	Turn the OSD display to OFF	O	O	O	—	—
	DRN	DRIVE ON	Turn the drive to ON	It is valid in the RS-232C factory and STB			—	—
	DRF	DRIVE OFF	Turn the drive to OFF				—	—
	DSP	INPUT SIGNAL DISPLAY	Display current input signal information	O	O	—	—	—
E	DS2	DISPLAY2	Display current various information	O	O	—	—	—
	EWY	EEPROM WRITE YES	Start the Plug & Play EEPROM writing mode	O	—	—	—	—
F	EWN	EEPROM WRITE NO	Complete the Plug & Play EEPROM writing mode	O	—	—	—	—
	FAN	FACTORY ADJUST NO	Complete the factory adjustment mode	O	—	—	—	—
	FAY	FACTORY ADJUST YES	Start the factory adjustment mode	—	—	O	—	—
	FST	FINAL SET UP	Turn various setting into the Shipping state	O	—	—	—	—
	FRP	FRESH POSITION	Initialize SCREEN value of integrator	O	O	—	—	—
	FCA	FAN CONTROL AUTO	Turn the fan roll control to AUTO	O	O	—	—	—
	FCM	FAN CONTROL MAX	Turn the fan roll control to MAX	O	O	—	—	—
	FMY	FULL MASK YES	Set to FULL MASK (white)	—	O	—	—	—
	FMR	FULL MASK RED	Set to FULL MASK (red)	—	O	—	—	—
	FMG	FULL MASK GREN	Set to FULL MASK (green)	—	O	—	—	—
	FMB	FULL MASK BLUE	Set to FULL MASK (blue)	—	O	—	—	—
	FMN	FULL MASK NO	Release the FULL MASK	—	O	—	—	—
	FXO	FIX OUTPUT	Set the audio output to fix	O	O	—	—	—
	F50	FREE RUN 50Hz	Set the free-running to Video 50Hz in the MASK setting	O	—	—	—	—
	F60	FREE RUN 60Hz	Set the free-running to Video 60Hz in the MASK setting	O	—	—	—	—
	F61	FREE RUN PC 60Hz	Set the free-running to Pc 60Hz in the MASK setting	O	—	—	—	—
	F70	FREE RUN 70Hz	Set the free-running to Video 70Hz in the MASK setting	O	—	—	—	—
G	GAJ	GET ADJUST	Get a various adjustment value of the display from EEPROM	O	—	—	—	—
	GPW	GET PANEL W/B	Get the panel W/B information from EEPROM	O	—	—	—	—
	GS1	GET STATUS 1	Get the version information of microcomputer from EEPROM	O	—	—	—	—
	GS2	GET STATUS 2	Get the PD information and temperature information from EEPROM	O	—	—	—	—
	GPS	GET POSITION DATA	TxD outputs the positioning data	O	O	O	—	—
	GSO	GET STATUS OPTION	TxD outputs data of various established state (OPTION)	O	O	O	—	—
	GSS	GET STATUS SET UP	TxD outputs data of various established state (SET UP)	O	O	O	—	—
	GAS	GET ADJUST SLOT	TxD outputs data of picture quality setting of SLOT	O	—	—	—	—
	GAR	GET ADJUST RGB	TxD outputs data of picture quality adjustment (RGB 1)	O	—	—	—	—

PDP-433CMX, PDP-433MXE

	Command	Name	Function	RS-232C Factory	RS-232C Integrator	Normal Validity	Direct Validity	UP/DOWN Validity
G	GWB	GET WHITE BALANCE	TxD outputs data of picture quality setting of RGB1	0	0	0	—	—
	GPD	GET POWER DOWN	TxD outputs POWER DOWN information	0	—	—	—	—
H	HCN	HIGH CONTRAST NO	Turn the high contrast setting to OFF	0	0	—	—	—
	HCY	HIGH CONTRAST YES	Turn the high contrast setting to ON	0	0	—	—	—
	HMS	HOURLY METER SET	Set the hour meter to optional time	0	—	—	0	—
	HMD	HOURLY METER DISP.	Display the hour meter	0	0	—	—	—
	H80	HDTV MODE 1080 i	Set the HDTV mode to 1080 i	0	0	—	—	—
	H35	HDTV MODE 1035 i	Set the HDTV mode to 1035 i	0	0	—	—	—

	PWS	POWER CONTROL MODE2	Turn the power control to MODE2 (Longevity life mode)	0	0	–	–	–
	PDF	PICTURE DEFAULT	Execute PICTURE DEFAULT	0	–	–	–	–
	RFY	REFERENCE YES	Start the reference adjustment mode	0	–	–	–	–
	SCM	COLOR SYSTEM SECAM	Turn the COLOR SYSTEM setting to SECAM	0	0	–	–	–
	STD	STANDARD W/B	Return the PIC and W/B of integrator to factory default value	–	0	–	–	–
	SM0	SCREEN MODE 0	Turn the screen size to DOT BY DOT	0	0	0	–	–
S	SM1	SCREEN MODE 1	Turn the screen size to 4:3	0	0	0	–	–
	SM2	SCREEN MODE 2	Turn the screen size to FULL	0	0	0	–	–
	SM3	SCREEN MODE 3	Turn the screen size to ZOOM	0	0	0	–	–
	SM5	SCREEN MODE 5	Turn the screen size to WIDE	0	0	0	–	–
	SLY	STILL YES	Turn the STILL setting to ON	0	0	0	–	–
	SLN	STILL NO	Turn the STILL setting to OFF	0	0	0	–	–
	TVA	COLOR SYSTEM AUTO	Turn the COLOR SYSTEM setting to AUTO	0	0	–	–	–
V	VFY	VIDEO FULL DISPLAY YES	Start 100% display	–	–	0	–	–
	VFN	VIDEO FULL DISPLAY NO	Complete 100% display	–	–	0	–	–
	VRO	VARIABLE OUTPUT	Turn the audio output to variable	0	0	–	–	–
Y	YCM	3S Y/C MOTION	Turn the 3D Y/C setting to MOTION	0	0	–	–	–
	YCS	3D Y/C STILL	Turn the 3D Y/C setting to STILL	0	0	–	–	–

6.4.3 GET Command

● Command Description

Command	Function
GAJ	Output data of an electronic VR adjustment value and a drive system adjustment value
GPW	Output data to be related to white balance adjustment of the panel
GS1	Output data such as version information, hour meter and pulse meter
GS2	Output data of power down, temperature and dew drop information
GAS	Output data to be related to picture quality setting of SLOT
GAR	Output data to be related to picture quality (RGB1 of the factory menu)
GPD	Output POWER DOWN information (past eight times)
GPS	Output a SCREEN parameter
GWB	Output a parameter of PICTURE and WHITE BALANCE
GSS	Output various setting of the SET UP item of menu mode / integrator mode
GSO	Output various setting of the OPTION item of menu mode / integrator mode

GAJ: Output data of an electron VR adjustment value and a drive system adjustment value

- Output it according to transmission order and size of the table below.
- Command is invalid except RS-232C factory adjustment mode.

Order	Data Contents	Size	Remarks
1	Setting mode of electric power upper limit value	3 byte	AB* (*: 0 to 3)
2	Electric power upper limit value (ABL)	(Reference data)	3 byte
3		(Offset data)	3 byte (Note 1)
4	Vsus adjustment value	(Reference data)	3 byte
5	Vofs adjustment value	(Reference data)	3 byte
6	V-SUS-B adjustment value	(Reference data)	3 byte
7	V-SUS-G adjustment value	(Reference data)	3 byte
8	Y-SUS-B adjustment value	(Reference data)	3 byte
9	Y-SUS-G adjustment value	(Reference data)	3 byte

(Note 1) : When performed in reference mode selection, offset data outputs the same value as the reference data.

GPW (Get Panel White balance): Output data to be related to white balance adjustment of panel

- Output it according to transmission order and size of the table below.
- Command is invalid except RS-232C factory adjustment mode.

Order	Data Contents	Size	Remarks
1	Panel color temperature mode	3 byte	PT* (*: 0 to 3)
2	Gain of W/B adjustment value Red	(Reference data)	3 byte
3		(Offset data)	3 byte (Note 1)
4	Gain of W/B adjustment value Green	(Reference data)	3 byte
5		(Offset data)	3 byte (Note 1)
6	Gain of W/B adjustment value Blue	(Reference data)	3 byte
7		(Offset data)	3 byte (Note 1)
8	Offset of W/B adjustment value Red	(Reference data)	3 byte
9		(Offset data)	3 byte (Note 1)
10	Offset of W/B adjustment value Green	(Reference data)	3 byte
11		(Offset data)	3 byte (Note 1)
12	Offset of W/B adjustment value Blue	(Reference data)	3 byte
13		(Offset data)	3 byte (Note 1)

(Note 1) : When performed in reference mode selection, offset data outputs the same value as the reference data.

GS1: Output data such as version information, hour meter and pulse meter

- Output it according to transmission order and size of the table below.
- Command is invalid except RS-232C factory adjustment mode.

Order	Data Contents	Size	Remarks
1	Display information	3 byte	See below
2	Module microcomputer model number	4 byte	5691 or F691
3	Module microcomputer version	3 byte	
4	Panel microcomputer version	3 byte	
5	Panel /FLASH ROM version	3 byte	
6	Hour meter (hour)	5 byte	Unit: H (time)
7	Pulse meter	7 byte	Unit: 0.01G (10,000,000)
8	Main microcomputer model number	4 byte	5692
9	Main microcomputer version	3 byte	
10	Wide microcomputer version	3 byte	
11	Wide /FLASH ROM version	3 byte	

■ Display Information

Data	Model
MX5	PDP-503CMX (initial value)
MX4	PDP-433CMX / MXE
MD5	Module 50 inches
MD4	Module 43 inches
HD5	PDP-503HD
HD4	PDP-433HD

GS2: Output data of power down, temperature and dew drop information

- Output it according to transmission order and size of the table below.
- In the PD (Power Down) of RS-232C factory adjustment mode, NG except dew drop and AUDIO occurs and a command that except for 30 seconds to SD (shut down) is invalid.

Note: When NG occurred in the PD state, do not perform the "FAY" for 30 seconds to SD (Shut Down), and information acquisition is possible by perform the "GS2" directly. However it is necessary to set ID beforehand.

Order	Data Contents	Size	Remarks
1	AC information	1 byte	Always 0 (not used)
2	Service parts distinction	1 byte	0: DIGITAL ASSY adjustment completion 1: DIGITAL ASSY does not adjust (Service Assy)
3	Hour meter (hour, minute)	7 byte	*****H**M
4	Power down information	2 byte	1st/2nd (Note)
5	Temperature information	3 byte	8 bit
6	Dew drop information	1 byte	1: Dew drop NG
7	Panel microcomputer communication	1 byte	1: Communication NG
8	DIGITAL EEPROM communication	1 byte	1: Communication NG
9	DIGITAL EXPANDER communication	1 byte	1: Communication NG
10	Temperature information (TEMP2)	3 byte	8 bit
11	Temperature information (TEMP3)	3 byte	8 bit
12	Module microcomputer communication	1 byte	1: Communication NG
13	Wide microcomputer communication	1 byte	1: Communication NG
14	MAIN IIC	1 byte	1: Communication NG
15	MAIN EEPROM IIC	1 byte	1: Communication NG
16	AUDIO NG	1 byte	1: AUDIO NG
17	FAN NG	1 byte	1: FAN NG

(Note) Refer to the following table about contents of PD information

Data	Power Down Point
0	Nothing
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	ADDRESS junction
7	ADDRESS resonance
8	DC/DC CONVERTER (DIGITAL)

GAS (Get Adjust Slot): Output data to be related to picture quality setting

- Transmit data according to transmission order and size of the table below.
- Data are SLOT sections of the factory menu.
- When current input function is except for VIDEO input of SLOT system, command is invalid.
- When SLOT is not connected or external SLOT is connected, command is invalid.
- Command is invalid except RS-232C factory adjustment mode.

Order	Data Contents		Size	Remarks
1	Y-DELAY	(Reference data)	3 byte	
2		(Offset data)	3 byte	(Note 1)
3	Y-OUT LEVEL	(Reference data)	3 byte	
4		(Offset data)	3 byte	(Note 1)
5	CD TINT	(Reference data)	3 byte	
6		(Offset data)	3 byte	(Note 1)
7	CDR OFFSET	(Reference data)	3 byte	
8		(Offset data)	3 byte	(Note 1)
9	CDB OFFSET	(Reference data)	3 byte	
10		(Offset data)	3 byte	(Note 1)
11	R-Y LEVEL	(Reference data)	3 byte	
12		(Offset data)	3 byte	(Note 1)
13	B-Y LEVEL	(Reference data)	3 byte	
14		(Offset data)	3 byte	(Note 1)

(Note 1) : When performed in reference mode selection, offset data outputs the same value as the reference data.

GAR: Output data to be related to picture quality (RGB1 of the factory menu)

- Transmit data according to transmission order and size of the table below.
- Command is invalid except RS-232C factory adjustment mode.

Order	Data Contents	Size	Remarks
1	AD MAIN CONT	(Reference data)	(Note 1)
2		(Offset data)	(Note 1) (Note 2)
3	AD R HIGH	(Reference data)	(Note 1)
4		(Offset data)	(Note 1) (Note 2)
5	AD G HIGH	(Reference data)	(Note 1)
6		(Offset data)	(Note 1) (Note 2)
7	AD B HIGH	(Reference data)	(Note 1)
8		(Offset data)	(Note 1) (Note 2)
9	AD R LOW	(Reference data)	(Note 1)
10		(Offset data)	(Note 1) (Note 2)
11	AD G LOW	(Reference data)	(Note 1)
12		(Offset data)	(Note 1) (Note 2)
13	AD B LOW	(Reference data)	(Note 1)
14		(Offset data)	(Note 1) (Note 2)
15	MAT CONT	(Reference data)	(Note 1)
16		(Offset data)	(Note 1) (Note 2)
17	MAT BRIGHT	(Reference data)	(Note 1)
18		(Offset data)	(Note 1) (Note 2)
19	MAT COLOR	(Reference data)	(Note 1)
20		(Offset data)	(Note 1) (Note 2)
21	MAT TINT	(Reference data)	(Note 1)
22		(Offset data)	(Note 1) (Note 2)

(Note 1) Setting data to be unrelated to current input function / input signal / setting output dummy data.

(Note 2) When performed in reference mode selection, offset data outputs the same value as the reference data.

GPS: Output data to be related to SCREEN adjustment data

- Transmit data according to transmission order and size of the table below.
- All the data are data of an integrator area.
- Except normal operation mode / each mode of RS-232C integrator adjustment, command is invalid.

Order	Data Contents	Size	Remarks
1	H.POSITION	3 byte	
2	V.POSITION	3 byte	
3	CLOCK	3 byte	(Note 1)
4	PHASE	3 byte	(Note 1)
5	V.SIZE	3 byte	

(Note 1) When current input signal mode is the VIDEO system and INPUT5 (DVI), adjustment data output dummy data (*).

GPD (Get Power Down), PD (Power Down) : Outputs information (contents of PD INFORMATION of service factory MENU)

- Output the acquired data according to the transmission order and size of the table below.
 - Except RS-232C factory adjustment mode and PD state, command is invalid.
- (Note)** Do not perform the "FAY" in the PD state, and information acquisition is possible by perform the "GPD" directly.
However it is necessary to set ID beforehand.

Order	Data Contents	Size	Remarks
1	The latest 1stPD information	1 byte	(Note 1)
2	The latest 2ndPD information	1 byte	(Note 1)
3	Hour meter information of the latest PD	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE
4	1stPD information before twice	1 byte	(Note 1)
5	2ndPD information before twice	1 byte	(Note 1)
6	Hour meter information of PD before twice	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE
7	1stPD information before three times	1 byte	(Note 1)
8	2ndPD information before three times	1 byte	(Note 1)
9	Hour meter information of PD before three times	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE
10	1stPD information before four times	1 byte	(Note 1)
11	2ndPD information before four times	1 byte	(Note 1)
12	Hour meter information of PD before four times	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE
13	1stPD information before five times	1 byte	(Note 1)
14	2ndPD information before five times	1 byte	(Note 1)
15	Hour meter information of PD before five times	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE
16	1stPD information before six times	1 byte	(Note 1)
17	2ndPD information before six times	1 byte	(Note 1)
18	Hour meter information of PD before six times	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE
19	1stPD information before seven times	1 byte	(Note 1)
20	2ndPD information before seven times	1 byte	(Note 1)
21	Hour meter information of PD before seven times	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE
22	1stPD information before eight times	1 byte	(Note 1)
23	2ndPD information before eight times	1 byte	(Note 1)
24	Hour meter information of PD before eight times	7 byte	Previous 5byte: HOUR Back 2byte: MINUTE

(Note 1) Refer to the following table about contents of PD information

Data	Power Down Point
0	Nothing
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	ADDRESS junction
7	ADDRESS resonance
8	DC/DC CONVERTER (DIGITAL)

GWB (Get White Balance): Output data to be related to picture quality / white balance

- Transmit data according to transmission order and size of the table below.
- Except each normal operation mode / RS-232C integrator adjustment / RS-232C factory adjustment mode, command is invalid.
- In the normal operation / RS-232C integrator adjustment mode, output two data of the current signal mode in the current input function and integrator area of current color mode.
- In the RS-232C factory adjustment mode, output data of factory RGB2.

Order	Data Contents	Size	Remarks
1	CONTRAST	3 byte	
2		3 byte	(Note 2)
3	BRIGHT	3 byte	
4		3 byte	(Note 2)
5	COLOR	3 byte	(Note 1)
6		3 byte	(Note 2)
7	TINT	3 byte	(Note 1)
8		3 byte	(Note 2)
9	R HIGH	3 byte	
10		3 byte	(Note 2)
11	G HIGH	3 byte	
12		3 byte	(Note 2)
13	B HIGH	3 byte	
14		3 byte	(Note 2)
15	R LOW	3 byte	
16		3 byte	(Note 2)
17	G LOW	3 byte	
18		3 byte	(Note 2)
19	B LOW	3 byte	
20		3 byte	(Note 2)
21	H.ENHANCE (H.SHARP)	3 byte	
22	V.ENHANCE (V.SHARP)	3 byte	

(Note 1) Setting data to be unrelated to current input function / input signal / setting output dummy data (*).

(Note 2) When performed in reference mode selection, offset data outputs the same value as the reference data.

**GSS: Output data to be related to various established state
(SET UP item of menu mode / integrator menu)**

- Transmit data according to transmission order and size of the table below.
- Except each normal operation mode / RS-232C integrator adjustment / RS-232C factory adjustment mode, command is invalid.

Order	Data Contents	Size	Output	Remarks
1	COLOR TEMP	1 byte	1: COLOR TEMP1 2: COLOR TEMP2 3: COLOR TEMP3 4: COLOR TEMP4 5: COLOR TEMP5	(Note 1)
2	DIGITAL NR	1 byte	0: OFF 1: LOW 2: MIDDLE 3: HIGH	(Note 1)
3	HIGH CONTRAST	1 byte	0: OFF, 1: ON	
4	PURECINEMA	3 byte	Same as the RS-232C command	(Note 1)
5	COLOR SYSTEM	3 byte	Same as the RS-232C command	(Note 1)
6	CLAMP	1 byte	1: AUTO 2: LOCKED	(Note 1)

10	BRIGHT ENHANCE	1 byte	0: OFF, 1: ON	
11	HDTV MODE	3 byte	Same as the RS-232C command	(Note 1)
12	VIDEO INPUT	1 byte	1: COMPONENT1 2: COMPONENT2	(Note 1)
13	Input function	3 byte	IN*	
14	Screen size	1 byte	0: DOT BY DOT 1: 4:3 (TYPE) 2: FULL (TYPE) 3: ZOOM 5: WIDE 6: 100% display	
15	SUB VOLUME (INPUT1)	2 byte	0 to 60	
16	SUB VOLUME (INPUT2)	2 byte	0 to 60	
17	SUB VOLUME (INPUT3)	2 byte	0 to 60	(Note 1)
18	SUB VOLUME (INPUT4)	2 byte	0 to 60	(Note 1)
19	SUB VOLUME (INPUT5)	2 byte	0 to 60	(Note 1)

(Note 1) Setting data to be unrelated to current input function / input signal / setting output dummy data (*).

GSO: Output data to be related to various established state (OPTION item of menu mode / integrator menu)

- Transmit data according to transmission order and size of the table below.
- Except each normal operation mode / RS-232C integrator adjustment / RS-232C factory adjustment mode, command is invalid.

Order	Data Contents	Size	Output	Remarks
1	POWER CONTROL	3 byte	Same as the RS-232C command	
2	OSD display	1 byte	0: OSD display prohibition 1: OSD display permission	
3	FULL MASK	3 byte		Display a RS-232C command of set MASK currently
4	R SIDE MASK LEVEL	3 byte	Adjustment value	
5	G SIDE MASK LEVEL	3 byte	Adjustment value	
6	B SIDE MASK LEVEL	3 byte	Adjustment value	
7	MASK CONTROL	1 byte	0: OFF, 1: ON	
8	ORBITER MODE	1 byte	0: OFF, 1: ON	
9	INVERSE MODE	1 byte	0: OFF, 1: ON	
10	COLOR MODE	1 byte	1: COLOR MODE1 2: COLOR MODE2	
11	MIRROR MODE	1 byte	X: Right and left inverting Y: Top and bottom inverting Z: Top and bottom right and left inverting N: OFF	
12	FAN CONTROL	1 byte	A: AUTO M: MAX	
13	MONITOR NAME	12 byte		
14	SLOT INPUT	1 byte	0: VIDEO (RGB) 1: COMPONENT1 2: COMPONENT2	(Note 1)
15	TEMPERATURE	3 byte	A/D input value	TEMP3
16	HOURLY METER	5 byte		Unit : H
17	KEY LOCK	1 byte	0: Lock release 1: Lock	

(Note 1) Output dummy data (*) in inside SLOT connection.

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 PCB LOCATION

● Rear View

7.1.2 SHUT DOWN/POWER DOWN DIAGNOSIS BY LED DISPLAY

When internal circuit abnormality and other operation abnormality occurred from this unit, self-diagnose display function by STANDBY/ON (LED) indicator is loaded.

Each NG point by LED blinking and a PD (power down) point are as follows.

● Shut Down

- Operations : When a microcomputer detected abnormality, turn the power supply to OFF.
- LED display : Green blinks

Examples: LED blinks in the DIGITAL-IIC communication NG

Number of blinks	Name
1	Panel Microcomputer NG
2	DIGITAL-IIC communication NG
3	Dewdrop abnormality
4	Temperature abnormality
5	FAN abnormality
6	Module microcomputer NG
7	Wide microcomputerNG
8	RGB-IIC communication NG
9	Audio NG

How to release the shut down state

When turn the power supply ON by remote control units, release from the shut down state, and turn the power supply ON.
(It is not necessary to turn the AC power OFF.)

● Power Down

- Operations : When this unit becomes the dangerous state, turn the power supply OFF with the protection circuit.
- LED display : Red blinks
- * When protection circuit more than two places almost worked simultaneously, display LED in order to 1st - 2nd.

Examples: LED blinks in the 1st power down = Y-DC/DC CONVERTER, 2nd power down = Y-DRIVE

Number of blinks	Name
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	Address junction
7	Address resonance
8	DIGITAL-DC/DC CONVERTER

How to release the power down state

AC power OFF

Wait for PD LED in the power supply module disappearing (for around 30 seconds).

Afterwards, wait moreover for five seconds.

Return by AC power ON.

* After power down release, this unit rises up in the standby state.

● Block Diagram of Shut Down Signal System

Note: ① - ⑧ show LED flashing number of times when shut down occurred in this route.

● Shut down diagnosis

① Panel microcomputer NG

When a module microcomputer failed in communication with a panel microcomputer, this NG occurs.

Shut down after OSD display for 30 seconds from the NG detection.

Abnormality to expect

Open / Short of communication line in the Assy

② DIGITAL-IIC communication NG

When a module microcomputer failed in communication with outside EEPROM or EXPANDER, this NG occurs.

Shut down after OSD display for 30 seconds from the NG detection.

* However, this communication NG may occur in the standby state.

Abnormality to expect

- Open / Short of communication line in the Assy
- Breaking of wire between DIGITAL VIDEO Assy (D1) and SW POWER SUPPLY Module (P2).

③ Dew drop detection

When it becomes the dew drop state in this unit, this NG occurs.

After the dew drop detection, shut down immediately.

Abnormality to expect for dew drop

Disconnect a connector CN2002 between Dew drop sensor and Y DRIVE Assy.

④ Temperature abnormality

When temperature of this unit became abnormally high, this NG occurs.

Shut down after OSD display from the NG detection for 30 seconds.

Abnormality to expect when it occurs in the environment that is not high-temperature

- Disconnect a connector between SP TERMINAL (L) Assy (SPL1) and MX AUDIO Assy (A3).
- Disconnect a connector between MX AUDIO Assy (A5) and RGB Assy (R8).
- Disconnect a connector between DIGITAL VIDEO Assy (D18) and temperature sensor 1 (TE1).

Reference

Shut down temperature of each temperature sensor

TEMP2 data ≥ 150 ($\approx 80^{\circ}\text{C}$)

TEMP3 data ≥ 117 ($\approx 64^{\circ}\text{C}$)

* TEMP1 is not shut down by temperature, and it shuts down when connector was disconnected.

Temperature display by "INFORMATION" of the factory menu

TEMP1 ($^{\circ}\text{C}$) \approx TEMP1 (data) -50

TEMP2 ($^{\circ}\text{C}$) \approx TEMP2 (data) /2+5

TEMP3 ($^{\circ}\text{C}$) \approx TEMP3 (data) /2+5

⑤ FAN NG

When a fan does not function, this NG occurs.
Shut down after OSD display for 30 seconds from the NG detection.

- * FAN NG detection functions only in case of following.
 - When FAN CONTROL setting is maximum
 - When sensor temperature of TEMP3 is more than 30°C with FAN CONTROL setting is AUTO.
(even if connector is left when does not turn the FAN, this unit does not work.)

Abnormality to expect

- Disconnect a junction connector between FAN (A6) and MX AUDIO Assy (A7).
- Disconnect a connector between MX AUDIO Assy (A5) and RGB Assy (R8).
- FAN forced stop by an alien substance involving it.

⑥ Module microcomputer NG

When a main microcomputer failed in communication with a module microcomputer, this NG occurs.
Shut down after OSD display for 30 seconds from the NG detection.
* However, this communication NG may occur by the standby state.

Abnormality to expect

- Open / Short of communication line in the Assy.
- Disconnect a connector between RGB Assy (R3) and DIGITAL VIDEO Assy (D3).
- Writing defectiveness of module microcomputer (IC1207) software.

⑦ Wide microcomputer NG

When a main microcomputer failed in communication with a wide microcomputer, this NG occurs.
Shut down after OSD display for 30 seconds from the NG detection.

Abnormality to expect

- Open / Short of communication line in the Assy.
- Software writing defectiveness of wide microcomputer (IC5601).
- Writing defectiveness of outside Flash ROM (IC5602) on the wide microcomputer.

⑧ RGB-IIC communication NG

When a main microcomputer failed in IIC communication, this NG occurs.
Shut down after OSD display for 30 seconds from the NG detection.
* However, this communication NG may occur by the standby state.

Abnormality to expect

- Open / Short of communication line in the Assy.
- SLOT and the insertion of the SLOT junction PC Board are incomplete.

Notes: There is the case that it becomes the following symptom except NG when the SLOT insertion is incomplete.

- Audio of INPUT3 and 4 are not output.
- Do not switch from INPUT3 to 5 (SLOT function).
- Video signal of INPUT1 and 2 are not appear.

⑨ Audio NG

When DC component added on the speaker output line, this NG occurs.
After the NG detection, shut down immediately.

Abnormality to expect

- Disconnect a connector between MX AUDIO Assy (A5) and RGB Assy (R8).
- Short-circuits between + and - of C8615 and C8622.

● Block Diagram of Power Down Signal System

Note: ① - ⑧ show LED flashing number of times when power down occurred in this route.

● Kind and function of the various protection circuit (P.D. circuit)

Assy Name	OSD Display	Red LED Number of Blinks	Kind of P.D. Circuit	Function	Remarks
Y DRIVE Assy	Y-DRV	1	VCP OCP	P.D. by VCP overcurrent

			3.3V UVP	P.D. by 3.3V undervoltage (= overcurrent)	
			2.5V OVP	P.D. by 2.5V overvoltage	
			2.5V UVP	P.D. by 2.5V undervoltage (= overcurrent)	

Reference

OVP : **O**ver **V**oltage **P**rotect
 UVP : **U**nder **V**oltage **P**rotect
 OCP : **O**ver **C**urrent **P**rotect

Note 1: AC200V P.D. is not applicable to the PDP-433MXE model.

PDP-433CMX, PDP-433MXE

● Diagnosis Method in Power Down

1st/2nd/time stamp are stored eight times of power down in the past.

① OSD display of PD history

Display with "INFORMATION" of the factory menu.

1	5	10	15	20	25	30	32
1	INFO						
				#1-S1-I	N4-02-2	*NT	
5	PD	INFO					
		1ST	2ND				
	1	X-DDC			05148H25M		
	2	ADR-K	X-DDC		02248H14M		
	3	Y-DRV	DC-DC		01358H36M		
10	4	ADRES			00348H15M		
	5				00000H00M		
	6				00000H00M		
	7				00000H00M		
15	8				00000H00M		
16							

Display of PD point

Power Down Point	OSD Display
Y-DRIVE	Y-DRV
Y-DC/DC CONVERTER	Y-DDC
X-DC/DC CONVERTER	X-DDC
X-DRIVE	X-DRV
Power supply	POWER
ADDRESS junction	ADRES
ADDRESS resonance	ADR-K
DC/DC CONVERTER (DIGITAL)	DC-DC

Time stamp display

[OOOOOH] : HOUR, [OOM] : MINUTE

Example)

Time stamp display is [65432H10M] → 65432 hours 10 minutes pass since the time of product shipment.

② PD history read in by RS-232C command "GPD"

Order	Data contents	Size
1	The latest 1st PD point	1 byte
2	The latest 2nd PD point	1 byte
3	The latest PD time stamp	7 byte
4	1st PD point before twice	1 byte
5	2nd PD point before twice	1 byte
6	PD time stamp before twice	7 byte
7	1st PD point before three times	1 byte
8	2nd PD point before three times	1 byte
9	PD time stamp before three times	7 byte
10	1st PD point before four times	1 byte
11	2nd PD point before four times	1 byte
12	PD time stamp before four times	7 byte
13	1st PD point before five times	1 byte
14	2nd PD point before five times	1 byte
15	PD time stamp before five times	7 byte
16	1st PD point before six times	1 byte
17	2nd PD point before six times	1 byte
18	PD time stamp before six times	7 byte
19	1st PD point before seven times	1 byte
20	2nd PD point before seven times	1 byte
21	PD time stamp before seven times	7 byte
22	1st PD point before eight times	1 byte
23	2nd PD point before eight times	1 byte
24	PD time stamp before eight times	7 byte

Data of PD point

Power Down Point	"GPD" Data
Y-DRIVE	1
Y-DC/DC CONVERTER	2
X-DC/DC CONVERTER	3
X-DRIVE	4
Power supply	5
ADDRESS junction	6
ADDRESS resonance	7
DC/DC CONVERTER (DIGITAL)	8

Time stamp data

before 5 byte: HOUR, after 2 byte: MINUTE

Example)

Time stamp is [6543210] → 65432 hours 10 minutes pass since the time of product shipment.

● Diagnosis of the error point in the various protection circuit (P.D. circuit) operation (Red LED blinks)

Number of Blinks	P.D. Point in Operation	Error Pont	Possible Part of Error	Circuit State	Operation P.D. Circuit	Diagnosis Condition
1	Y DRIVE	Y DRIVE Assy	IC2206, IC2214 (Pulse module), IC2203, IC2204, IC2212, IC2213, IC2213, IC2217, R2209	K2211 Lo	VCP OCP

Note: About PS PD

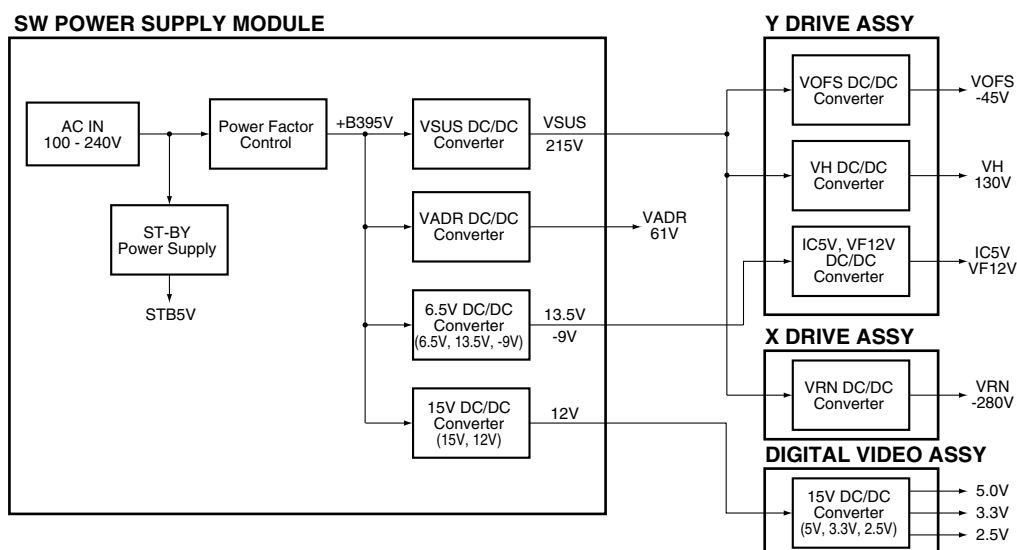

The condition that Red LED blinks five times (power supply PD)

1 When the internal protection circuit of SW POWER SUPPLY Module worked

2 When a microcomputer was not able to identify the PD point

Being careful because the protection circuit of SW POWER SUPPLY Module cannot conclude that worked.

● Block diagram for Power supply section

● Supplementary information

1. Power on/off switch for the large-signal system (SW102)

Function: Only the power for the small-signal system (15V, 12V, 6.5V, 13.5V, and -9V) is on, and the power for the large-signal system (VSUS, VADR) is off.

Usage: Use when only an operational check for the small-signal system is required.

Supplementary information:

When this switch is to be used, the wires of pin 5 (DIG, ADR, and PD) of the P2 connector of the power-supply module should be disconnected to prevent the PD circuit from operating. To turn the power of the large-signal system off without using this switch, operation from an external PC through RS-232C commands "DRF" is basically required. In this case, the above procedure is not required, as the PD circuit is muted by software.

Method of power supply ON in the large signal system OFF state with RS-232C command

- ① Confirm that this unit is the standby state.
 - ② Transmit RS-232C command "DRF."
 - ③ Turn the power supply ON by remote control unit, side key or command "PON."
- * When turn the power supply OFF once, return to setting of large signal system ON.
When turn the power supply ON in the large signal system OFF, transmit "DRF" command each time.

2. 200V AC power-down switch (SW101)

Function: While 200V AC voltage is applied, operation of the PD circuit is turned on and off (ON when the switch is set to 100V AC, and OFF when the switch is set to 200V AC).

Setting: For the MXE model only, the switch is set to 200V, and for other models, it is set to 100V.

3. Temperature compensation of the VSUS voltage for the drive system

Function: Control the power supply voltage mentioned above according to temperature. (Temperature compensation works so that the voltage is lowered on the lower-temperature side, and is raised on the higher-temperature side.)

Purpose: To improve the yield by compensating the temperature characteristics of the panel.

Supplementary information:

For this model, temperature compensation is performed only for the VSUS voltage, and not for the VOFS voltage, and it is controlled by software.

4. When a fuse blows

- If a fuse blows, never turn the power on again only after replacing the fuse. (In most cases, the fuse itself did not have any problem. So as long as factors of overcurrent have not been removed, chances of destruction increase every time the power is turned on. In the worst case, about a dozen parts may be destroyed.)
- Principally, the whole power-supply module must be replaced.

5. Voltage adjustment of the panel drive

As this model employs the electronic VR system for the VSUS and VOFS voltages, and as the voltage-adjustment data are stored in the DIGITAL assembly, voltage adjustment of the panel drive is not necessary when the power-supply modules are changed. (For VADR, VH, and VRN, adjustments with semifixed VR controls are necessary.)

For this model, as the power-supply block has been developed and designed by an outside vendor, at the point you know which module is a cause of failure (through diagnosis described elsewhere in this manual), change the corresponding modules, and do not diagnose or repair the module.

Similarly, the switches and the semifixed VRs inside the power-supply module must not be adjusted without a special reason.

7.1.3 AUTOMATIC BACKUP OF DIGITAL VIDEO ASSY DATA

■ Description

Auto copies data of EEPROM (IC1204/2k bit) on the DIGITAL VIDEO Assy as data for backup in the Assy replacement to one part of EEPROM (IC5502/64k bit) of the RGB Assy (area A of figure below).
Therefore DIGITAL VIDEO Assy or main unit adjustment item in the RGB Assy replacement (data of EEPROM on DIGITAL VIDEO Assy) is succeeded to Assy after replacement.

Note : COLOR and TINT are main unit adjustment items, but does not automatic backup because there are data in area C
(refer to figure below).

● Contents of EEPROM on the DIGITAL VIDEO Assy

- Adjustment value of PANEL White Barance
 - PANEL-R HIGH : Main unit adjustment item
 - PANEL-G HIGH : Main unit adjustment item
 - PANEL-B HIGH : Main unit adjustment item
 - PANEL-R LOW : Main unit adjustment item
 - PANEL-G LOW : Main unit adjustment item
 - PANEL-B LOW : Main unit adjustment item

Perform automatic data backup
- Adjustment value of ABL
 - ABL LEVEL : Main unit adjustment item

Perform automatic data backup
- Adjustment value of drive system
 - X-SUS-B : Main unit adjustment item
 - X-SUS-G : Main unit adjustment item
 - Y-SUS-B : Main unit adjustment item
 - Y-SUS-G : Main unit adjustment item
 - V-SUS : Main unit adjustment item
 - V-OFFSET : Main unit adjustment item

Perform automatic data backup
- Pulse meter
- Hour meter
- Setting data of various FULL MASK

■ Flow of basic automatic backup

Use a key word, and judge each data (area A and B) whether it is the adjusted data or the not adjusted data, and perform the copy operation.

- ① Perform the copy whenever enter the service factory mode. (There is not relation in a key word.)
- ② In the power supply ON, confirm a key word, and perform the copy when a key word of DIGITAL VIDEO Assy (area B) does not adjust and a key word of RGB Assy is adjustment complete.

Actual automatic backup operation

1. In the DIGITAL VIDEO Assy replacement (Use the service Assy)

Do not need modification of key words.

Replace DIGITAL VIDEO Assy with DIGITAL VIDEO Assy for service, and auto copies the backup data from EEPROM of RGB Assy to EEPROM of DIGITAL VIDEO Assy by turning the power on.

2. In the RGB Assy replacement (Do not need to be service Assy.)

Replace RGB Assy, and auto copy from EEPROM of DIGITAL VIDEO Assy to EEPROM of RGB Assy as for backup by enter the service factory mode.

3. In the DIGITAL VIDEO Assy replacement (Recycling of a repair part)... When install DIGITAL VIDEO Assy after repair to other sets.

Set a key word of DIGITAL VIDEO Assy to recycle in "Do not adjust".

Enter the service factory mode before removing the DIGITAL VIDEO Assy to recycle, and execute SERVICE PARTS of item INITIALIZE. (However, limit it when work as the main unit and OSD display is possible.)

Readjustment is necessary when cannot execute SERVICE PARTS.

Note: When does not change key word and repairs the DIGITAL VIDEO Assy and installed the DIGITAL VIDEO Assy after repair in another set 2, this function does not work in normal.

In addition, when have entered the service factory mode in the state mentioned above, copy data in the DIGITAL VIDEO Assy of set 1 before repair to area A in the RGB Assy of set 2 to install after repair.

Therefore necessary data have been performed overwrite with set 2.

Cannot replace the data which performed overwriting once.

4. In the DIGITAL VIDEO Assy replacement (Recycling of a repair part)... When install the DIGITAL VIDEO Assy after repair to the former set

Do not need modification of key words.

After repair the DIGITAL VIDEO Assy, work with the main unit adjustment value as before by installing it to the former set.

Perform the same operation as item 1 afterward.

5. When replace the DIGITAL VIDEO Assy and the RGB Assy to another Assy simultaneously

Normal copy with this function does not work. Readjustment is necessary.

Others

1. COLOR and TINT are main unit adjustment items, but does not automatic backup because there are data in area C.

About these two items

① When replaced only the DIGITAL VIDEO Assy

Readjustment is unnecessary so that data is stored in the RGB Assy.

② When replaced the RGB Assy

Readjustment is necessary after repair.

2. Data in EEPROM of the RGB Assy (area C) are Assy adjustment items except COLOR and TINT.

Do not need a readjustment when replaced the Service Assy.

7.1.4 DISASSEMBLY

SW Power Supply Module

① Remove the Rear Case (M). (Screws × 20)

② Remove four screws.

③ Remove the SW Power Supply Module.

↓

④ Insert the SW Power Supply Module into the slit of Sub Frame L and R.

Sub Frame L

Sub Frame R

SW Power Supply Module

↓

Diagnosis

DIGITAL VIDEO Assy

- ① Remove the Rear Case (M). (Screws × 20)
- ② Remove the SW Power Supply Module.
(Connector, Screws × 4)
- ③ Remove a screw of earth block.
- ④ Remove the Terminal Panel CMX. (Connector, Screws × 9)
- ⑤ Remove the RGB Base. (Screws × 4)

- ⑥ Remove connectors and binders, and remove the RGB Base with PCB Assys.

- ⑦ Remove the DIGITAL VIDEO Assy.
(Connector, Circuit Board Spacer × 6)

Y DRIVE, SCAN (A) and (B) Assemblies

X DRIVE Assy

- ① Remove the Rear Case (M). (Screws × 20)
- ② Remove the X DRIVE Assy. (Connector, Screws × 8)

Diagnosis of the Video Card (PDA-5002)

- ① Remove the Rear Case (M). (Screws × 20)
- ② Remove the Video Card. (Screws × 2)
- ③ Remove the SLOT CONNECTOR Assy from the RGB Assy and reconnect it with the Jig Cable (GGD1035).

- ④ Reconnect the Video Card. (Slot does not pass it.)

Diagnosis

7.2 IC INFORMATION

- The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.

● Block Diagram

● Pin Function

Name	Pin No.	I/O	Num.	Function
CLK	39	I	1	Shift clock (start edge partial response)
DA	44	I/O	1	The serial data input of shifting register
DB	37	I/O	1	The serial data output of shifting register
LE	40	I	1	It output data done a latch of by "L" level.
A/ \bar{B}	36	I	1	A shift directional control signal of shift register
\bar{CLR}	45	I	1	It do data of shift register with "L" by "L" level.
OC1	42	I	1	An output control terminal of HVO
OC2	43	I	1	An output control terminal of HVO
HVO	1-30, 51-82, 99, 100	O	64	High voltage drive output (HV01-HV064)
VDD	41	-	1	Logic power supply
GND	34, 35, 38, 46, 47, 87-89, 91-94	-	12	Standard potential. This is common to HV01-HV064.
VH1	84, 85, 49, 50	-	4	The high potential circuit power supply which is common to HV01-HV032
VH2	31, 32, 96, 97	-	4	The high potential circuit power supply which is common to HV033-HV064
NC	33, 48, 95, 83, 86, 90, 98	-	7	It is the insulation electrically

94	PF2	NC terminal
95	PF1	NC terminal
96	PF0	NC terminal
97	P50	NC terminal
98	P51	NC terminal
99	VSS	GND
100	VSS	GND

PDP-433CMX, PDP-433MXE

No.	Pin Name	Function
101	P52	NC terminal
102	P53	NC terminal
103	AVCC	3.3V power supply
104	VREF	A/D, D/A reference voltage input (unused)
105	STOPB	The drive control input from IC 1703 (PE5064)
106	P41	NC terminal
107	RYBY	The flash memory note ready input
108	ADR_K_EMG_L1	The emergency input from panel bottom address resonance block.
109	ADR_K_EMG_U1	The emergency input from panel upper part address resonance block
110	ADR_K_EMG_L2	The emergency input from panel bottom address resonance block. (unused)
111	ADR_K_EMG_U2	The emergency input from panel upper part address resonance block(unused)
112	P47	NC terminal
113	AVSS	GND
114	VSS	GND
115	MUTE_ADR	The panel mute signal output
116	MUTE_SUS	The XY drive mute signal output (unused)
117	P15	NC terminal
118	HD	The HD signal input from outside ASSY (RGB ASSY, etc)
119	P13	NC terminal
120	P12	NC terminal
121	PC_VIDEO	The PC/Video identification output
122	VD	The VD signal input from outside ASSY (RGB ASSY, etc)
123	MD0	The microcomputer mode of operation select signal input
124	MD1	The microcomputer mode of operation select signal input
125	MD2	The microcomputer mode of operation select signal input
126	PG0	NC terminal
127	CS_31Y	IC1301, IC1401(PD 6358) control terminal
128	CS_31X	IC1301, IC1401(PD 6358) control terminal

• Pin Function

No.	Pin Name	Function
1	TXD	Serial 3 line data output for communication with a panel microcomputer
2	CLK	Serial 3 line clock for communication with a panel microcomputer
3	NC	NC terminal
4	NC	NC terminal
5	NC	NC terminal
6	NC	NC terminal
7	NC	NC terminal
8	BYTE	The external data bus width reshuffling input (I am unused and connect GND)
9	CNVSS	A power supply for program note (a note, 5V, usually, pull-down
10	XCIN	NC terminal
11	XCOUT	NC terminal
12	RESET	A reset input terminal
13	XOUT	Clock output terminal
14	VSS	GND
15	XIN	Clock input terminal
16	VCC	5V standby power
17	NMI	Because a NMI interruption terminal is unused, It handle pull up.
18	REM	The SR signal input
19	REQ_PU	A communication demand from a panel microcomputer (the pulse meter acquisition)
20	/SW_TRG	Main switch OFF / ON search
21	NC	NC terminal
22	NC	NC terminal
23	NC	NC terminal
24	AC_OFF	AC power OFF search and power supply ASSY differentiation.
25	PD_TRIGGER	Power down search
26	NC	NC terminal
27	NC	NC terminal
28	NC	NC terminal
29	SCL	EEPROM, IIC communication with power supply ASSY
30	SDA	EEPROM, IIC communication with power supply ASSY
31	TXD1	Communication with the outside (a program note)
32	RXD1	Communication with the outside (a program note)
33	CLK1	Communication with the outside (a program note)
34	BUSY1	Communication with the outside (a program note)
35	TXD0	Communication with outside ASSY (microcomputers main in RGB ASSY, etc)
36	RXD0	Communication with outside ASSY (microcomputers main in RGB ASSY, etc)
37	NC	NC terminal
38	REQ_MD/A_MUTE	232C communication demand (a request to a main microcomputer) / audio system mute
39	NC	NC terminal
40	NC	NC terminal
41	EPM	The EPM input for program note (L fixation)
42	NC	NC terminal
43	PU_CE	Enables/ for panel microcomputer
44	NC	NC terminal
45	MOD_SW/A_NG	The model of machines distinction input / audio system NG input
46	CE	The CE input for program note (H fixation)
47	DITHER/SW_STC	Power supply search of a dither setting / media receiver for module
48	NC	NC terminal
49	/SW_STP	Power supply search of a panel
50	NC	NC terminal

PDP-433CMX, PDP-433MXE

No.	Pin Name	Function
51	NC	NC terminal
52	RELAY	The output for power supply ON / OFF change
53	POWER/MSTATE	Input / SII861 master information for power supply ON / OFF change
54	NC	NC terminal
55	WE_PN	Buffer state control for panel microcomputer note
56	MD0	The panel microcomputer mode of operation change output
57	MD2	The panel microcomputer mode of operation change output
58	FWE	The panel microcomputer program note control signal output
59	RST_PU	The panel microcomputer reset output
60	PN_MUTE	The panel mute input
61	NC	NC terminal
62	VCC	5V standby power
63	NC	NC terminal
64	VSS	GND
65	NC	NC terminal
66	NC	NC terminal
67	/A_SCL	IIC clock for audio system
68	/A_SDA	IIC data for audio system
69	APD_MUTE	A mute signal of address series
70	ADR_K_PD	The address oscillatory system PD input
71	ADR_PD	The address series PD input
72	DCC_PD	The power supply system PD input
73	NC	NC terminal
74	NC	NC terminal
75	RST2	Panel microcomputer reset search
76	NC	NC terminal
77	/DDC_SCL	IIC communication with a media receiver
78	/DDC_SDA	IIC communication with a media receiver
79	NC	NC terminal
80	NC	NC terminal
81	DEW_DET	The dew condensation sensor input
82	NC	NC terminal
83	NC	NC terminal
84	NC	NC terminal
85	NC	NC terminal
86	LED_G	Green LED lighting (LED on interface ASSY in a panel module)
87	LED_R	Red LED lighting (LED on interface ASSY in a panel module)
88	NC	NC terminal
89	BUSY	Communication permission / inhibiting signal from a panel microcomputer
90	NC	NC terminal
91	NC	NC terminal
92	/F_KEY1	The front KEY input
93	MAX_PLS2/F_KEY2	The terminal / front KEY input for brightness setting mode of operation change
94	TEMP1	The A/D input for temperature sensor
95	MAX_PLS? /CCKM	Terminal / connection search for brightness setting mode of operation change
96	AVSS	GND for AD conversion
97	PM_ST	The A/D input for model of machines distinction
98	VREF	Reference voltage for AD conversion
99	AVCC	5V standby power for AD conversion
100	RXD	Serial 3 line data entry for communication with a panel microcomputer

■ PD6358A (DIGITAL VIDEO ASSY : IC1301)

• Picture Improved IC

● Pin Function

No.	Pin Name	Function
1	VSS	GND
2	TESTO6	Test output terminal (unused)
3	OSDCLK	The CLK input for OSD
4	TTST	Test input terminal (unused)
5	VDDI	2.5V power supply
6	OVDDE-01	3.3V power supply
7	AGO0	Address data output (G signal)
8	VDDI	2.5V power supply
9	AGO2	Address data output (G signal)
10	AGO3	Address data output (G signal)
11	AGO4	Address data output (G signal)
12	VDDI	2.5V power supply
13	ARO6	Address data output (R signal)
14	AGO7	Address data output (G signal)
15	VDDI	2.5V power supply
16	ARO9	Address data output (R signal)
17	ABO9	Address data output (B signal)
18	VDDI	2.5V power supply
19	ADRCLKO2	The address CLK output (for panel upper part)
20	ARO12	Address data output (R signal)
21	ARO13	Address data output (R signal)
22	AGO14	Address data output (G signal)
23	AGO15	Address data output (G signal)
24	ARO16	Address data output (R signal)
25	ARO17	Address data output (R signal)
26	VSS	GND
27	ABO17	Address data output (B signal)
28	AGO17	Address data output (G signal)
29	AGO18	Address data output (G signal)
30	ABO19	Address data output (B signal)
31	UDAT15	Microcomputer data bus
32	UDAT12	Microcomputer data bus
33	UDAT9	Microcomputer data bus
34	UDAT5	Microcomputer data bus
35	OVDDE-06	3.3V power supply
36	APLP	APL value output trigger signal
37	OVDDE-08	3.3V power supply
38	CS5BI	The chip select input
39	CS4BI	The chip select input
40	UADRI13	Microcomputer address bus
41	UADRI9	Microcomputer address bus
42	UADRI6	Microcomputer address bus
43	UADRI2	Microcomputer address bus
44	UADRI1	Microcomputer address bus
45	TESTI2	Test input terminal (unused)
46	BIT0	The subfield No output (the 0 bit)
47	OVDDE-11	3.3V power supply
48	TESTO4	Test output terminal (unused)
49	ARO39	Address data output (G signal)
50	AGO38	Address data output (G signal)

No.	Pin Name	Function
51	VSS	GND
52	ABO37	Address data output (B signal)
53	ABO36	Address data output (B signal)
54	ARO36	Address data output (R signal)
55	ABO34	Address data output (B signal)
56	ADRCLKO4	The address CLK output (for panel bottom part)
57	AGO33	Address data output (G signal)
58	AGO32	Address data output (G signal)
59	AGO31	Address data output (G signal)
60	AGO30	Address data output (G signal)
61	AGO29	Address data output (G signal)
62	VDDI	2.5V power supply
63	ABO27	Address data output (B signal)
64	AGO26	Address data output (G signal)
65	VDDI	2.5V power supply
66	AGO24	Address data output (G signal)
67	VDDI	2.5V power supply
68	ABO22	Address data output (B signal)
69	VDDI	2.5V power supply
70	ARO21	Address data output (R signal)
71	ARO20	Address data output (R signal)
72	VDDI	2.5V power supply
73	OVDDE-14	3.3V power supply
74	TDI	The JTAG input
75	RBI9	The R picture B aspect signal input (the ninth bit)
76	VSS	GND
77	RBI8	The R picture B aspect signal input (the eighth bit)
78	RBI6	The R picture B aspect signal input (the sixth bit)
79	RBI4	The R picture B aspect signal input (the fourth bit)
80	OVSS-09	GND
81	RSTB	Reset input
82	GBI8	The G picture B aspect signal input (the eighth bit)
83	OVDDE-18	3.3V power supply
84	GBI5	The G picture B aspect signal input (the fifth bit)
85	GBI2	The G picture B aspect signal input (the second bit)
86	DEI	DE signal input
87	BBI6	The B picture B aspect signal input (the sixth bit)
88	BBI3	The B picture B aspect signal input (the third bit)
89	VDI	VD signal input
90	HDI	HD signal input
91	RAI6	The R picture A aspect signal input (the sixth bit)
92	RAI2	The R picture A aspect signal input (the second bit)
93	TESTI0	Test input terminal (unused)
94	OVSS-11	GND
95	GAI7	The G picture A aspect signal input (the seventh bit)
96	GAI3	The G picture A aspect signal input (the third bit)
97	GAI0	The G picture A aspect signal input (the 0 bit)
98	BAI6	The B picture A aspect signal input (the sixth bit)
99	BAI3	The B picture A aspect signal input (the third bit)
100	BAI0	The B picture A aspect signal input (the 0 bit)

No.	Pin Name	Function
101	TESTO7	Test output terminal (unused)
102	TESTO5	Test output terminal (unused)
103	OSDH	OSDH input
104	BLK	OSDBLK input
105	OSDB	OSDB signal input
106	NC	NC terminal
107	ARO1	Address data output (R signal)
108	ARO2	Address data output (R signal)
109	ARO3	Address data output (R signal)
110	ARO4	Address data output (R signal)
111	ARO5	Address data output (R signal)
112	ABO5	Address data output (B signal)
113	ARO7	Address data output (R signal)
114	ARO8	Address data output (R signal)
115	ABO8	Address data output (B signal)
116	AGO9	Address data output (G signal)
117	AGO10	Address data output (G signal)
118	ADRCLKO1	Address CLK output (for panel upper part)
119	ABO11	Address data output (B signal)
120	ABO12	Address data output (B signal)
121	ARO14	Address data output (R signal)
122	ARO15	Address data output (R signal)
123	ABO15	Address data output (B signal)
124	ABO16	Address data output (B signal)
125	AGO16	Address data output (G signal)
126	ARO18	Address data output (R signal)
127	AGO19	Address data output (G signal)
128	OVDDE-05	3.3V power supply
129	UDAT13	Microcomputer data bus
130	UDAT10	Microcomputer data bus
131	UDAT6	Microcomputer data bus
132	UDAT3	Microcomputer data bus
133	UDAT0	Microcomputer data bus
134	OVDDE-07	3.3V power supply
135	LR	The panel LR select input
136	RDBI	Microcomputer read control terminal
137	CLKSEL	CLK select input
138	UADRI10	Microcomputer address bus
139	UADRI7	Microcomputer address bus
140	UADRI3	Microcomputer address bus
141	CYCLEB	Address data output control signal
142	BIT2	Subfield No. output (the second bit)
143	SFSTB	Address data output control signal
144	OVSS-05	GND
145	TESTO2	Test output terminal (unused)
146	ABO38	Address data output (B signal)
147	ARO38	Address data output (R signal)
148	ARO37	Address data output (R signal)
149	AGO36	Address data output (G signal)
150	ARO35	Address data output (R signal)

No.	Pin Name	Function
151	ADRCLKO3	The address CLK output (for panel bottom part)
152	ABO33	Address data output (B signal)
153	ABO32	Address data output (B signal)
154	VDDI	2.5V power supply
155	ABO30	Address data output (B signal)
156	VDDI	2.5V power supply
157	ABO28	Address data output (B signal)
158	ARO28	Address data output (R signal)
159	ABO26	Address data output (B signal)
160	ABO25	Address data output (B signal)
161	ABO24	Address data output (B signal)
162	ARO24	Address data output (R signal)
163	ARO23	Address data output (R signal)
164	ARO22	Address data output (R signal)
165	AGO21	Address data output (G signal)
166	AGO20	Address data output (G signal)
167	TDO	JTAG signal
168	TMS	JTAG signal
169	RBI7	The R picture B aspect signal input (the seventh bit)
170	TCK	JTAG signal
171	RBI5	The R picture B aspect signal input (the fifth bit)
172	RBI3	The R picture B aspect signal input (the third bit)
173	RBI1	The R picture B aspect signal input (the first bit)
174	OVDDE-16	3.3V power supply
175	GBI7	The G picture B aspect signal input (the seventh bit)
176	OVSS-10	GND
177	GBI4	The G picture B aspect signal input (the fourth bit)
178	GBI1	The G picture B aspect signal input (the first bit)
179	BBI9	The B picture B aspect signal input (the ninth bit)
180	BBI5	The B picture B aspect signal input (the fifth bit)
181	BBI2	The B picture B aspect signal input (the second bit)
182	RAI9	The R picture A aspect signal input (the ninth bit)
183	CLK3	CLK input terminal (unused)
184	RAI5	The R picture A aspect signal input (the fifth bit)
185	RAI1	The R picture A aspect signal input (the first bit)
186	TEST11	Test input terminal (unused)
187	GAI9	The G picture A aspect signal input (the ninth bit)
188	GAI6	The G picture A aspect signal input (the sixth bit)
189	GAI2	The G picture A aspect signal input (the second bit)
190	BAI9	The B picture A aspect signal input (the ninth bit)
191	BAI5	The B picture A aspect signal input (the fifth bit)
192	BAI2	The B picture A aspect signal input (the second bit)
193	BAI1	The B picture A aspect signal input (the first bit)
194	OVSS-01	GND
195	OVSS-02	GND
196	OSDG	OSDG signal input
197	ARO0	Address data output (R signal)
198	ABO0	Address data output (B signal)
199	ABO1	Address data output (B signal)
200	ABO2	Address data output (B signal)

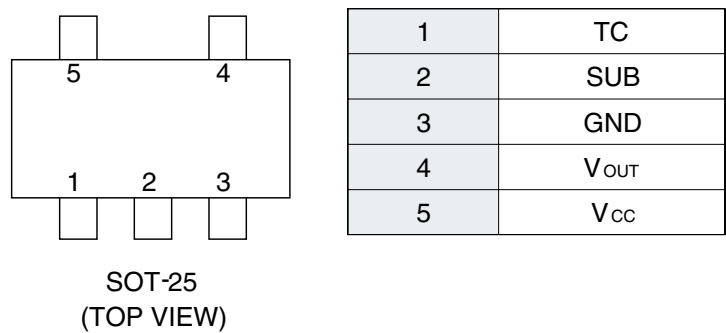

No.	Pin Name	Function
201	ABO3	Address data output (B signal)
202	ABO4	Address data output (B signal)
203	OVDDE-02	3.3V power supply
204	ABO6	Address data output (B signal)
205	ABO7	Address data output (B signal)
206	VDDI	2.5V power supply
207	OVDDE-03	3.3V power supply
208	ARO10	Address data output (R signal)
209	ABO10	Address data output (B signal)
210	AGO11	Address data output (G signal)
211	AGO12	Address data output (G signal)
212	ABO13	Address data output (B signal)
213	ABO14	Address data output (B signal)
214	OVDDE-04	3.3V power supply
215	OVSS-03	GND
216	ARO19	Address data output (R signal)
217	TESTO1	Test output terminal (unused)
218	UDAT14	Microcomputer data bus
219	UDAT11	Microcomputer data bus
220	UDAT7	Microcomputer data bus
221	UDAT4	Microcomputer data bus
222	UDAT1	Microcomputer data bus
223	VDRD	V signal output
224	HWRBI	Microcomputer wright control terminal
225	UADRI14	Microcomputer address bus
226	OVDDE-09	3.3V power supply
227	UADRI11	Microcomputer address bus
228	UADRI8	Microcomputer address bus
229	UADRI4	Microcomputer address bus
230	BIT3	Subfield No. output (the third bit)
231	BIT1	Subfield No. output (the first bit)
232	OVDDE-10	3.3V power supply
233	TESTO3	Test output terminal (unused)
234	ABO39	Address data output (B signal)
235	AGO37	Address data output (G signal)
236	OVSS-06	GND
237	AGO35	Address data output (G signal)
238	ADRCLKO5	Address CLK output (for panel bottom part)
239	ARO34	Address data output (R signal)
240	ARO33	Address data output (R signal)
241	ABO31	Address data output (B signal)
242	ARO31	Address data output (R signal)
243	ABO29	Address data output (B signal)
244	ARO29	Address data output (R signal)
245	OVDDE-12	3.3V power supply
246	ARO27	Address data output (R signal)
247	ARO26	Address data output (R signal)
248	ARO25	Address data output (R signal)
249	OVDDE-13	3.3V power supply
250	AGO23	Address data output (G signal)

No.	Pin Name	Function
251	AGO22	Address data output (G signal)
252	VDDI	2.5V power supply
253	ABO20	Address data output (B signal)
254	OVSS-07	GND
255	OVDDE-15	3.3V power supply
256	OVSS-08	GND
257	RBI2	The R picture B aspect signal input (the second bit)
258	TRST	JTAG signal
259	GBI9	The G picture B aspect signal input (the ninth bit)
260	GBI6	The G picture B aspect signal input (the sixth bit)
261	OVDDE-17	3.3V power supply
262	GBI3	The G picture B aspect signal input (the third bit)
263	GBI0	The G picture B aspect signal input (the 0 bit)
264	BBI8	The B picture B aspect signal input (the eighth bit)
265	BBI4	The B picture B aspect signal input (the fourth bit)
266	BBI1	The B picture B aspect signal input (the first bit)
267	RAI8	The R picture A aspect signal input (the eighth bit)
268	OVDDE-19	3.3V power supply
269	RAI4	The R picture A aspect signal input (the fourth bit)
270	RAI0	The R picture A aspect signal input (the 0 bit)
271	FREERUN	The freerun control input
272	GAI8	The G picture A aspect signal input (the eighth bit)
273	GAI5	The G picture A aspect signal input (the fifth bit)
274	GAI1	The G picture A aspect signal input (the first bit)
275	BAI8	The B picture A aspect signal input (the eighth bit)
276	BAI4	The B picture A aspect signal input (the fourth bit)
277	VDDE	3.3V power supply
278	OSDV	OSDV input
279	VSS	GND
280	OSDR	OSDR signal input
281	VDDE	3.3V power supply
282	AGO1	Address data output (G signal)
283	VSS	GND
284	VDDI	2.5V power supply
285	VDDI	2.5V power supply
286	AGO5	Address data output (G signal)
287	AGO6	Address data output (G signal)
288	VDDI	2.5V power supply
289	AGO8	Address data output (G signal)
290	VSS	GND
291	ADRCLKO0	The address CLK output (for panel upper part)
292	VDDE	3.3V power supply
293	ARO11	Address data output (R signal)
294	VSS	GND
295	AGO13	Address data output (G signal)
296	VDDE	3.3V power supply
297	ABO18	Address data output (B signal)
298	VSS	GND
299	TESTO0	Test output terminal (unused)
300	VDDI	2.5V power supply

No.	Pin Name	Function
301	UDAT8	Microcomputer data bus
302	VSS	GND
303	UDAT2	Microcomputer data bus
304	VDDI	2.5V power supply
305	OVSS-04	GND
306	UADRI15	Microcomputer address bus
307	VDDI	2.5V power supply
308	UADRI12	Microcomputer address bus

332	VSS	GND
333	VPD	GND
334	VDDE	3.3V power supply
335	RBI0	The R picture B aspect signal input (the 0 bit)
336	VSS	GND
337	ACLK	CLK input (25MHz)
338	VDDI	2.5V power supply
339	CLK4	CLK input (50MHz)
340	VSS	GND
341	BBI7	The B picture B aspect signal input (the seventh bit)
342	VDDI	2.5V power supply
343	BBI0	The B picture B aspect signal input (the 0 bit)
344	RAI7	The R picture A aspect signal input (the seventh bit)
345	VDDI	2.5V power supply
346	RAI3	The R picture A aspect signal input (the third bit)
347	VSS	GND
348	CLK2	The image system CLK input
349	VDDI	2.5V power supply
350	GAI4	The G picture A aspect signal input (the fourth bit)
351	VSS	GND
352	BAI7	The B picture A aspect signal input (the seventh bit)

• Block Diagram

• Pin Function

Pin No.	Pin Name	I/O	TYPE	Description
1/2	Xin / Xout	I/O	Analog	Pins form an on-chip reference oscillator when connected to terminals of an external parallel resonant crystal. Xin may be connected to TTL/CMOS external clock source. If Xin connected to external clock other than crystal, leave Xout (pin 2) unconnected.
7/3	S0 / S1	I	CMOS/TTL	Digital control inputs to select input frequency range and output frequency scaling. Refer to Tables 7 & 8 for selection. S0 has internal pulldown. S1 has internal pullup.
4	LF	I	Analog	Loop Filter. Single ended tri-state output of the phase detector. A two-pole passive loop filter is connected to Loop Filter (LF).
6	FSOUT	O	CMOS/TTL	Modulated Clock Frequency Output. The center frequency is the same as the input reference frequency for FS781. Input frequency is multiplied by 2x and 4x for FS782 and FS784 respectively.
8	VDD	P	Power	Positive Power Supply.
5	VSS	P	Power	Power Supply Ground

● Pin Function

Pin No.	Symbol	I/O	Typical signal	Description
1	B/CbOUT	O	1.83V	Amplifier output signal monitor
2	ADDRESS	I	—	I ² C slave address setting
3	R/CrOUT	O	1.83V	Amplifier output signal monitor
4	NC	—	—	Not used
5	NC	—	—	Not used
6	XPOWER SAVE	I	TTL	Power save setting
7	DGNDREG	—	GND	Register GND
8	DVccREG	—	5V	Register power supply
9	SDA	I	—	Control register data input
10	SCL	I	—	Control register CLK input
11	XSENABLE	I	TTL	Enable signal input for 3-wire control register
12	SEROUT	O	TTL	3-wire control register data readout
13	3WIRE/I ² C	I	—	Selection of input between I ² C bus and 3-wire bus
15	AVccADREF	—	5V	Reference power supply for A/D converter
16, 94	AVccAD3	—	3.3V	Analog power supply for A/D converter
17	VRT	O	2.9V	Top reference voltage output for A/D converter
18, 92	DVccAD3	—	3.3V	Digital power supply for A/D converter
19, 32, 42, 54, 65, 76, 90	DVccADTTL	—	5V	TTL output power supply for A/D converter
20, 33, 44, 55, 67, 77, 89	DGNDADTTL	—	GND	TTL output GND for A/D converter
21, 22, 24 to 28, 31	RA0 to RA7	O	TTL	Data output for R-channel port A side
23, 30, 43, 50, 59, 66, 79, 86	DGNDAD3	—	GND	Digital GND for A/D converter
29, 80	AGNDAD3	—	GND	Analog GND for A/D converter
34 to 41	RB0 to RB7	O	TTL	Data output for R-channel port B side
45 to 49, 51 to 53	BA0 to BA7	O	TTL	Data output for B-channel port A side
56 to 58, 60 to 64	BB0 to BB7	O	TTL	Data output for B-channel port B side
68 to 75	GA0 to GA7	O	TTL	Data output for G-channel port A side
78, 81 to 85, 87, 88	GB0 to GB7	O	TTL	Data output for G-channel port B side
91	DVccAD	—	5V	Digital power supply for A/D converter
93	VRB	O	1.9V	Bottom reference voltage output for A/D converter
95	AGNDADREF	—	GND	Reference voltage GND for A/D converter

PDP-433CMX, PDP-433MXE

Pin No.	Symbol	I/O	Typical signal	Description
96	DVccPLLTTTL	—	5V	TTL output power supply for PLL
97	DGNDPLLTTTL	—	GND	TTL output GND for PLL
98	XCLK	O	TTL	Inverted CLK output
99	CLK	O	TTL	CLK output
100	1/2XCLK	O	TTL	Inverted 1/2CLK output
101	1/2CLK	O	TTL	1/2CLK output
103	DSYNC/ DIVOUT	O	TTL	DSYNC or DIVOUT signal output
104	UNLOCK	O	Open collector	Unlock signal output
105	SOGOUT	O	TTL	Output for SYNC ON GREEN
106	HOLD	I	TTL	Input for phase comparison disable signal
107	XTLOAD	I	TTL	Programmable counter reset setting
108	EVEN/ODD	I	TTL	Inverted pulse input of ADC sampling CLK
109	XCLKIN	I	PECL	Inverted CLK input for testing
110	CLKIN	I	PECL	CLK input for testing
111	SYNCIN1	I	TTL	Sync input 1
112	SYNCIN2	I	TTL	Sync input 2
113	CLPIN	I	TTL	Clamp pulse input
114	DVccPLL	—	5V	Digital power supply for PLL
115	DGNDPLL	—	GND	Digital GND for PLL
116	AVccVCO	—	5V	Analog power supply for PLL VCO
117	AGNDVCO	—	GND	Analog GND for PLL VCO
118	RC1	—	2.1V	External pin for PLL loop filter
119	RC2	—	2 to 4.5V	External pin for PLL loop filter
120	AVccIR	—	5V	Analog power supply for IREF
121	IREF	I	1.2V	Current setup
123	AGNDIR	—	GND	Analog GND for IREF
124	G/YIN1	I	—	G/Y signal input 1
125	AVccAMPG	—	5V	Power supply for G/Y amplifier block
126	G/YIN2	I	—	G/Y signal input 2
127	AGNDAMPG	—	GND	GND for G/Y amplifier block
128	G/YCLP	—	—	Clamp capacitor for brightness
129	B/CbCLP	—	—	Clamp capacitor for brightness
130	R/CrCLP	—	—	Clamp capacitor for brightness
132	SOGIN1	I	2.8V	SYNC ON GREEN signal input 1
133	B/CbIN1	I	—	B/Cb signal input 1

Pin No.	Symbol	I/O	Typical signal	Description
134	AVccAMPB	—	5V	Power supply for B/Cb amplifier block
135	SOGIN2	I	2.8V	SYNC ON GREEN signal input 2
136	B/CbIN2	I	—	B/Cb signal input 2
137	AGNDAMPB	—	GND	GND for B/Cb amplifier block
139	R/CrIN1	I	—	R/Cr signal input 1
140	AVccAMPR	—	5V	Power supply for R/Cr amplifier block
141	R/CrIN2	I	—	R/Cr signal input 2
142	AGNDAMPR	—	GND	GND for R/Cr amplifier block
143	G/YOUT	O	1.83V	Monitor pin for amplifier output signal
144	DAC TEST OUT	O	5V	DAC testing output for amplifier block control register
14, 102, 122, 131, 138	DPGND	—	GND	GND

8. PANEL FACILITIES AND SPECIFICATIONS

8.1 PANEL FACILITIES

■ MAIN UNIT

Note

When optional speakers have been connected, the operation panel on the main unit will not be operable.

Main unit

- ① **Display stand**
- ② **Remote control sensor**
Point the remote control toward the remote sensor to operate the unit.
- ③ **STANDBY/ON indicator**
This indicator is red during standby mode, and turns to green when the unit is in the operation mode. Flashes green when Power-Management function is operating. The flashing pattern is also used to indicate error messages.

Operation panel on the main unit

- ④ **STANDBY/ON button**
Press to put the display in operation or standby mode.
- ⑤ **INPUT button**
Press to select input.
- ⑥ **MENU button**
Press to open and close the on-screen menu.
- ⑦ **ADJUST (▲/▼/▶/◀) buttons**
Use to navigate menu screens and to adjust various settings on the unit. Usage of cursor buttons within operations is clearly indicated in the on-screen display.
- ⑧ **SET button**
Press to adjust or enter various settings on the unit.
- ⑨ **SCREEN SIZE button**
Press to select the screen size.
- ⑩ **AUTO SET UP button**
When using computer signal input, automatically sets the POSITION and CLOCK/PHASE to optimum values.

■ CONNECTION PANEL

Plasma Display [PDP-433CMX/PDP-433MXE] Section

The plasma display is provided with 2 video input connectors, 1 video output connector, audio input/output jacks and speaker terminals.

There are also CONTROL IN/OUT jacks for connection of PIONEER components with the  mark.

When this video card is installed on a plasma display, an additional three sets of video input connectors are provided (total five), together with one additional video output connector (total two).

① SPEAKER (R) terminal

For connection of an external right speaker.
Connect a speaker whose impedance is 8 -16 Ω .

② CONTROL IN/OUT (monaural mini jacks)

For connection of PIONEER components that bear the  mark. Making CONTROL connection enables control of the plasma display as a component in a system.

③ COMBINATION IN/OUT

DO NOT MAKE ANY CONNECTIONS TO THESE TERMINALS.

These terminals are used in the factory setup.

④ RS-232C

DO NOT MAKE ANY CONNECTIONS TO THIS TERMINAL.

This terminal is used in the factory setup.

⑤ INPUT1 (mini D-sub 15 pin)

For connection of components that have RGB or component output jacks such as a personal computer, DVD player, or external RGB decoder. Make sure that the connection made corresponds to the format of the signal output from the connected component.

⑥ OUTPUT (INPUT1) (mini D-sub 15 pin)

Use the OUTPUT (INPUT1) connector to output the video signal to an external monitor or other component.

Note: The video signal will not be output from the OUTPUT (INPUT1) connector when the main power of this display is off or in standby mode.

⑦ INPUT2 (BNC jacks)

For connection of components that have RGB or component output jacks such as a personal computer, DVD player, or external RGB decoder. Make sure that the connection made corresponds to the format of the signal output from the connected component.

⑧ Synchronizing signal impedance selector switch

Depending on the connections made at INPUT2, it may be necessary to set this switch to match the output impedance of the connected component's synchronization signal.

When the output impedance of the component's synchronization signal is above 75 Ω , set this switch to the 2.2 k Ω position.

⑨ **AUDIO INPUT (Stereo mini jack)**

Use to obtain sound when INPUT1, INPUT2 or INPUT5 is selected.

Connect this jack to the audio output connector of the device connected to the plasma display's INPUT1 or INPUT2, or to the audio output connector of the device connected to the video card's INPUT5.

⑩ **AUDIO OUTPUT (Stereo mini jack)**

Use to output the audio of the selected source component connected to the plasma display to an AV amplifier or similar component.

⑪ **MAIN POWER switch**

Use to switch the main power of the plasma display on and off.

⑫ **AC INLET**

A power cable is furnished with the plasma display; connect one end of the power cable to this connector, and the other end to a standard AC power source.

⑬ **SPEAKER (L) terminal**

For connection of an external left speaker. Connect a speaker that has an impedance of 8 -16 Ω .

■ REMOTE CONTROL UNIT

- ① **SCREEN SIZE button**
Press to select the screen size.
- ② **INPUT buttons**
Use to select the input.
- ③ **MENU button**
Press to open and close the on-screen menu.
- ④ **ADJUST (▲/▼/▶/◀) buttons**
Use to navigate menu screens and to adjust various settings on the unit.
Usage of cursor buttons within operations is clearly indicated at the bottom the on-screen menu display.
- ⑤ **SET button**
Press to adjust or enter various settings on the unit.
- ⑥ **MUTING button**
Press to mute the volume.
- ⑦ **AUTO SET UP button**
When using computer signal input, automatically sets the POSITION and CLOCK/ PHASE to optimum values.
- ⑧ **STANDBY/ON button**
Press to put the unit in operation or standby mode.
- ⑨ **DISPLAY button**
Press to view the unit's current input and setup mode.
- ⑩ **POINT ZOOM button**
Use to select and enlarge one part of the screen.
- ⑪ **VOLUME (+/-) buttons**
Use to adjust the volume.

■ INSTALLATION OF THE UNIT

Installation using the supplied display stand

Be sure to fix the supplied stand to the installation surface.
Use commercially available M8 bolts that are 25 mm longer than the thickness of the installation surface.

- 1 Fix the supplied stand to the installation surface at each of the 4 prepared holes using commercially available M8 bolts .

- 2 Set this unit in the stand.

- 3 Fix this unit using the supplied washer and bolt.

Use a 6 mm hex wrench to bolt them.

⚠ CAUTION

Because this unit weighs about 88 lbs 3 oz (about 30 kg) and the lack of depth makes it fairly unstable, please use 2 people or more when packing, carrying or installing.

Installation using the optional PIONEER stand or installation bracket

- Please be sure to request installation or mounting of this unit or the installation bracket by an installation specialist or the dealer where purchased.
- When installing, be sure to use the bolts provided with the stand or installation bracket.
- For details concerning installation, please refer to the instruction manual provided with the stand or installation bracket.

Installation using accessories other than the PIONEER stand or installation bracket (sold separately)

- When possible, please install using parts and accessories manufactured by PIONEER. PIONEER will not be held responsible for accident or damage caused by the use of parts and accessories manufactured by other companies.
- For custom installation, please consult the dealer where the unit was purchased, or a qualified installer.

Wall-mount installation of the unit

This unit has been designed with bolt holes for wall-mount installation, etc.. The installation holes that can be used are shown in the diagram below.

- Be sure to attach in 4 or more locations above and below, left and right of the center line.
- Use bolts that are long enough to be inserted 1/2 inch (12 mm) to 11/16 inch (18 mm) into the main unit from the attaching surface for both a holes and b holes. Refer to the side view diagram below.
- As this unit is constructed with glass, be sure to install it on a flat, unwarpd surface.

Rear view diagram

Side view diagram

CAUTION

To avoid malfunction, overheating of this unit, and possible fire hazard, make sure that the vents on the main unit are not blocked when installing. Also, as hot air is expelled from the air vents, be careful of deterioration and dirt build up on rear surface wall, etc..

CAUTION

Please be sure to use an M8 (Pitch = 1.25 mm) bolt. (Only this size bolt can be used.)

CAUTION

Because this unit weighs about 88 lbs 3 oz (about 40 kg) and the lack of depth makes it fairly unstable, please use 2 people or more when packing, carrying or installing.

CAUTION

This unit incorporates a thin design. To ensure safety if vibrated or shaken, please be sure to take measures to prevent the unit from tipping over.
